# Leading producer of cables and cable systems

4

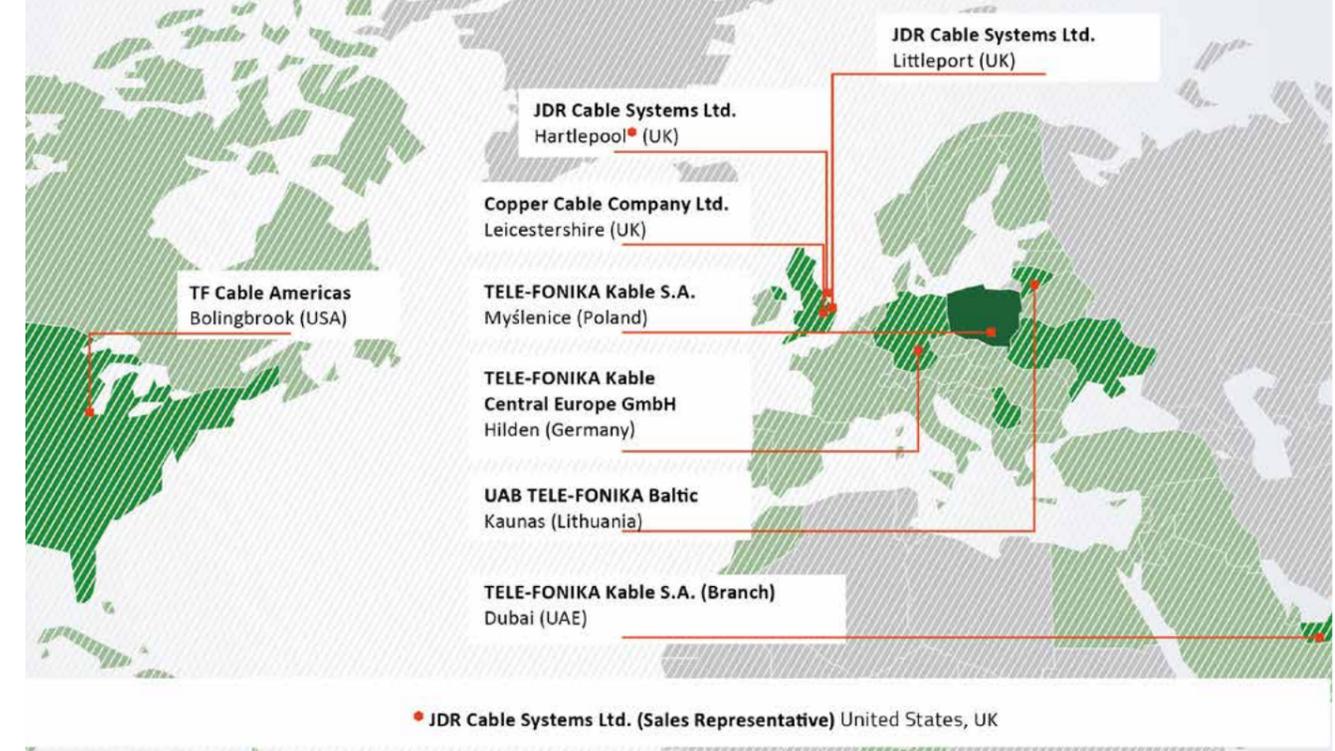

The TELE-FONIKA Kable Group has been present on the domestic and international cable industry market for more than 25 years. A stable development strategy based on full diversification of outlets enabled the strengthening of the position of our company among world's leading cable companies with significant development potential.

Services and products provided by TF Kable have numerous applications in the most important industry sectors – they include more than 25,000 proven standard constructions. Furthermore, they include specialist assortment tailored to the individual needs of business partners.

Additionally, our production facilities (in Poland, Serbia and Ukraine), the Bukowno-Poland recycling plant and commercial companies (responsible for the geo-regional distribution of products) demonstrate a significant development potential. This is also true in the case of our modern fire test laboratory in Krakow-Wielicka plant, which performs several hundred flammability pre-tests annually, and a laboratory of high and extra high voltages in Bydgoszcz.

As a result of implementation of our growth strategy, in August 2017 TFKable Group acquired JDR Cable Systems Ltd, the leading manufacturer of submarine umbilicals and power cables to the global offshore energy industry.

In the world's harshest environments and ever-increasing water depths, JDR's world-leading products and services bring power and control to offshore oil, gas and renewable energy systems.

5

## Experience and competence of the TELE-FONIKA Kable Group

**Kraków-Wielicka plant** – production of PVC or XLPE insulated 1 kV cables with copper or aluminium conductor, screened or armoured types, fire resistant and halogen free cables, overhead conductors as well as rubber insulated and/or rubber sheathed cables with voltage up to 30kV for heavy industry, signaling and control cables for special applications

**Kraków-Bieżanów plant** – production of PCV or XLPE insulated copper wires and cables up to 1 kV, halogen free and fire resistant types and copper or silver-copper (Cu-Ag) overhead conductors for railway traction.

**Bydgoszcz plant** – the largest in Europe production center of medium, high and extra high voltage cables with voltage up to 500 kV

**Myślenice plant** – production copper and fiber optic telecommunication cables, data telecommunication cables and automotive wires

**Zajecar plant (Serbia)** – production of low and medium voltage cables, signaling and control cables, telecommunication cables, as well as halogen-free cables and wires

**Czernihiv plant (Ukraine)** – production of copper wires and cables up to 1 kV, fire resistant and flame retardant cables as well as insulated overhead aluminum conductors

**Bukowno-Poland plant (recycling of cable waste)** – with the recycling capacity of approx. 10 thousand tons of cable waste per year. This allows for the recovery of fractions from individual materials with purity of over 99.5%

**Fire Test Laboratory in the Krakow-Wielicka production plant** – equipped with special apparatus that enables to provide flame propagation test on bundled cables, smoke density test as well as circuit integrity test with water or mechanical shock, test for corrosive gases emission

**Laboratory of High and Extra Voltages in the production plant in Bydgoszcz** – equipped with 4 Faraday cages and research filed for qualification tests for cables and systems up to 500kV

**JDR Cable Systems** – As a result of acquiring JDR Cable Systems Limited, TFKable has expanded its assets with two UK production facilities. JDR manufactures submarine power cables as well as subsea umbilical cables consisting of components for power distribution, data transfer, monitoring and remote control, of offshore facilities. Additionally, our sales portfolio has been extended by offshore installation and maintenance services, located in JDR's service centres in the United States, UK, ensuring constant support for our business partners.

Low Voltage Rubber Flexible Cable for Reeling Applications

## DESIGN FEATURES

Conductors	Annealed flexible stranded tinned copper conductor class 5 acc. to IEC 60228.
Separator	If needed a suitable tape separator between the conductor and insulation.
Insulation	EPDM rubber, halogen-free, lead-free compound, type 3GI3 acc. to DIN VDE 0207/20, developed by TF Kable
Circuit identification	Colour coding of power conductors compliant to HD 308, DIN VDE 0293- 308 <b>-J version:</b> 3 - core: Green-yellow, blue, brown 4 - core: Green-yellow, brown, black, grey or green-yellow, blue, brown, black 5 - core: Green-yellow, blue, brown black, grey Above 5 cores: Green-yellow, other cores black with white numbering  <b>-O version:</b> 3 - core: Brown, black, grey or blue, brown, black 4 - core: Blue, brown, black, grey 5 - core: Blue, brown, black, grey, black Above 5 cores: Black with white numbering
Inner sheath	A synthetic thermosetting compound type Gm1b acc. to DIN VDE 0207/21, Black
Anti-torsion braid	Braid of polyamide threads between inner and outer sheath
Outer sheath	Special synthetic thermosetting compound, type 5GM3 acc. to DIN VDE 0207/21, developed by TF Kable, Black

8

## FEATURES

Rated Voltage $U_0/U$	0,6/1 kV
Max. operating voltage $U_m$	1,2 kV
AC test voltage	3 kV

- Current carrying capacity: DIN VDE 0298-4
- Max. conductor operating temperature: +90°C
- Max. conductor temperature during short circuit: +250°C
- Minimum ambient temperature for fixed installation: -40°C
- Minimum ambient temperature for mobile installation: -25°C
- Minimum bending radius acc. to DIN VDE 0298-3:

OD of cable[mm]	>8 ≤ 12	>12 ≤ 20	>20
Fixed installation	3D	4D	4D
On drums	5D	5D	5D
On deflection pulleys	7,5D	7,5D	7,5D
Moving freely	4D	5D	5D

- Roller bending test
- Reeling test
- Twist limits: 25°/m
- Travel speed up to: 180m/min
- Tensile load: 20N/mm<sup>2</sup>
- Oil resistant: PN-EN 60811-404, IEC 60811-404
- UV resistant: UL 2556, ISO 4892-2
- Ozone resistant: PN-ISO 1431-1
- Example of standard sheath marking:  
<VDE>TF KABLE 3 NSHTÖU -J 3x10 0,6/1kV CE year + meter TFCrane
- Excellent tear, impact and abrasion resistant outer sheath
- Flame propagation: PN-EN 60332-1-2, IEC 60332-1-2

9

## APPLICATIONS

Flexible cable designed for high mechanical stresses, especially for applications with frequent winding and unwinding with co-occurrent tensile and torsion stress. The cable is used for conveyors, container cranes, harbour cranes, building machinery, handling machines in mining and tunnelling equipment. For use in wet or dry conditions, in industrial units, in underground and open-cast mining, in explosion-risk areas.

Standard length cable packing 500 m on drums.  
Other forms of packing and delivery are available on request

Ozone resistant: PN-ISO 1431-1  
Example of standard sheath marking:  
<VDE>TF KABLE 3 NSHTÖU -J  
3x70+3x35/3 0,6/1kV CE year + meter TFCrane

- Tear, impact and abrasion resistant outer sheath
- Flame propagation: PN-EN 60332-1-2, IEC 60332-1-2

### APPLICATIONS

Specially designed flexible cable for power mobile connections, for extremely high mechanical stresses. The cable is used in cable winding reels for winding and unwinding with co-occurrent tensile and torsion stress. Other applications include installation on conveyors, container cranes, harbour cranes, building machinery, handling machines. For use in wet or dry conditions, in industrial units, in underground and open-cast mining, in explosion-risk areas.

Standard length cable packing	500 m on drums. Other forms of packing and delivery are available on request

Low Voltage Rubber Flexible Cable with Integrated Fiber-Optics for Reeling Applications

## DESIGN FEATURES

Conductors	Annealed flexible stranded tinned or bare copper conductor class 5 to IEC 60228. Special construction ensuring higher flexibility.
Separator	If needed a suitable tape separator between the conductor and insulation.
Insulation	EPDM rubber, halogen-free, lead-free compound, type 3GI3 acc. to DIN VDE 0207/20, developed by TF Kable
Color of insulation*	Colour coding of power conductors compliant to HD 308, DIN VDE 0293- 308  Power cores: 3-core circuit identification: Brown, black, grey Earth cores: Green-yellow
Earth conductor	Tinned or bare copper conductor rubber insulated
Fiber Optic Module	A-D(ZN)13Y 6, 12, 18 or 24 fibers G50/125, G62,5/125 or E9/125
Identification of the fibers	Color coded fibres and tubes
Fiber covering	Loose buffered tubes with filling compound
Core arrangement	Three power cores twisted together, earth conductor split into 2 parts and FO placed into the interstices
Inner sheath	A special synthetic thermosetting compound type 5GM3 acc. to DIN VDE 0207/21, Yellow
Anti-torsion braid	Braid of polyamide threads between inner and outer sheath
Outer sheath	Special synthetic thermosetting compound, 5GM5 quality acc. to DIN VDE 0207/21 developed by TF Kable, Yellow

\* other identification available on request

 Ozone resistant: PN-ISO 1431-1
- Example of standard sheath marking:  
 TF KABLE 3 TFCrane (N)SHTÖU-J  
 3x35+2x16/2+FO 0,6/1kV CE year + meter
- Excellent tear, impact and abrasion resistant outer sheath
  - Flame propagation: PN-EN 60332-1-2, IEC 60332-1-2

## APPLICATIONS

Specially designed flexible cable for power mobile connections, for extremely high mechanical stresses. The cable is used in cable winding reels for winding and unwinding with co-occurrent tensile and torsion stress. Other applications include installation on conveyors, container cranes, harbour cranes, building machinery, handling machines. For use in wet or dry conditions, in industrial units, in underground and open-cast mining, in explosion-risk areas.

Standard length cable packing	500 m on drums. Other forms of packing and delivery are available on request

Medium Voltage Rubber Flexible Cable for Reeling Applications

## DESIGN FEATURES

18

Conductors	Annealed flexible stranded tinned or bare copper conductor class 5 to IEC 60228. Type of conductor design: opposite-lay with special length of lay.
Separator	Semi-conductive tape between the power conductor and insulation and between earth conductor and semi-conductive layer
Conductor screen	Semi-conductive layer of special rubber, developed by TFKable
Insulation	Special EPDM rubber, halogen-free, lead-free compound, exceeding type 3GI3, developed by TFKable, White
Insulation screen	Semi-conductive, special strippable layer over insulation of power cores. Maximum resistivity of semi-conductive layers $\approx 200 [\Omega \times m]$
Earth conductor	Tinned or bare copper conductor class 5 to IEC 60228 with extruded special semi-conductive rubber compound
Core arrangement	Power conductors and earth conductor (split into 3 parts) laid up around central semi-conductive filler. Anti-adhesion graphite over assembled conductors.
Inner sheath	A special synthetic thermosetting compound type 5GM3 acc. to DIN VDE 0207/21, Red
Anti-torsion braid	Braid of polyamide threads between inner and outer sheath
Outer sheath	Special synthetic thermosetting compound, 5GM5 quality acc. to DIN VDE 0207/21 developed by TFKable, Red

19

## FEATURES

Rated Voltage $U_0/U$	3,6/6 kV	6/10 kV	8,7/15 kV	12/20 kV
Max. operating voltage $U_m$	7,2 kV	12 kV	18 kV	24 kV
AC test voltage	11 kV	17 kV	24 kV	29 kV

- Partial discharge:  $1,25U_0/\max 20 \text{ pC}$
- Current carrying capacity: DIN VDE 0298-4

- Max. conductor operating temperature:  $+90^\circ\text{C}$
- Max. conductor temperature during short circuit:  $+250^\circ\text{C}$
- Minimum ambient temperature for fixed installation:  $-40^\circ\text{C}$
- Minimum ambient temperature for mobile installation:  $-25^\circ\text{C}$

- Minimum bending radius acc. to DIN VDE 0298-3:

Fixed installation	6D
On drums	12D
On deflection pulleys	15D
Moving freely	10D

- Roller bending test
- Reeling test
- Twist limits:  $100^\circ/\text{m}$
- Travel speed up to:  $180\text{m}/\text{min}$
- Tensile load:  $20\text{N}/\text{mm}^2$
- Oil resistant: PN-EN 60811-404, IEC 60811-404
- UV resistant: UL 2556, ISO 4892-2
- Ozone resistant: PN-ISO 1431-1
- Example of standard sheath marking:  
TF KABLE 3 TFCrane R-(N)TSCGEWÖU  
3x50+3x16/3 6/10kV year + meter
- Excellent tear, impact and abrasion resistant outer sheath
- Flame propagation: PN-EN 60332-1-2, IEC 60332-1-2

## APPLICATIONS

Specially designed flexible reeling cable with optimised dimensions for extremely high mechanical stresses occur in applications with monospiral reels and cylindrical reels, very high reeling speed, torsional stress. Also for connection of large material handling machines such as excavators, dumpers, crushers in open-cast mines. For use in wet or dry conditions, in industrial units, in underground and open-cast mining, in explosion-risk areas.

Standard length cable packing	500 m on drums. Other forms of packing and delivery are available on request

Medium Voltage Rubber Flexible Cable with Integrated Fiber-Optics for Reeling Applications

## DESIGN FEATURES

<b>Conductors</b>	Annealed flexible stranded tinned or bare copper conductor class 5 to IEC 60228. Type of conductor design: opposite-lay with special length of lay.
<b>Separator</b>	Semi-conductive tape on power and earthing conductors and insulation and between earth conductor and semi-conductive layer
<b>Conductor screen</b>	Semi-conductive layer of special rubber, developed by TF Kable
<b>Insulation</b>	Special EPDM rubber, halogen-free, lead-free compound, exceeding type 3GI3, developed by TF Kable, White
<b>Insulation screen</b>	Semi-conductive, special strippable layer over insulation of power cores. Maximum resistivity of semi-conductive layers $-200 [\Omega \times m]$
<b>Earth conductor</b>	Tinned or bare copper conductor class 5 to IEC 60228 with extruded special semi-conductive rubber compound
<b>Fiber Optic Module</b>	A-D(ZN)13Y 6, 12, 18 or 24 fibers G50/125, G62,5/125 or E9/125
<b>Identification of the fibers</b>	Color coded fibres and tubes
<b>Fiber covering</b>	Loose buffered tubes with filling compound
<b>Core arrangement</b>	Power cores, earth conductor (split into 2 parts) and FO laid up around conductive filler in the centre. Anti-adhesion graphite over assembled conductors.
<b>Inner sheath</b>	A special synthetic thermosetting compound type 5GM3 acc. to DIN VDE 0207/21, Red

## DESIGN FEATURES

<b>Anti-torsion braid</b>	Braid of polyamide threads between inner and outer sheath
<b>Outer sheath</b>	Special synthetic thermosetting compound, 5GM5 quality acc. to DIN VDE 0207/21 developed by TF Kable, Red

Medium Voltage Rubber Flexible Cable with Cradle Separator and Integrated Fiber-Optics for Reeling Applications

## DESIGN FEATURES

30

<b>Conductors</b>	Annealed flexible stranded tinned or bare copper conductor class 5 to IEC 60228. Type of conductor design: opposite-lay with special length of lay.
<b>Separator</b>	Semi-conductive tape on power and earthing conductors and insulation and between earth conductor and semi-conductive layer
<b>Conductor screen</b>	Semi-conductive layer of special rubber, developed by TF Kable
<b>Insulation</b>	Special EPDM rubber, halogen-free, lead-free compound, exceeding type 3GI3, developed by TF Kable, White
<b>Insulation screen</b>	Semi-conductive, special strippable layer over insulation of power cores. Maximum resistivity of semi-conductive layers $\sim 200 [\Omega \times m]$
<b>Earth conductor</b>	Tinned or bare copper conductor class 5 to IEC 60228 with extruded special semi-conductive rubber compound
<b>Fiber Optic Module</b>	A-D(ZN)13Y 6, 12, 18 or 24 fibers G50/125, G62,5/125 or E9/125
<b>Identification of the fibers</b>	Color coded fibres and tubes
<b>Fiber covering</b>	Loose buffered tubes with filling compound
<b>Core arrangement</b>	Power cores, earth conductor (split into 2 parts), and FO laid up around semi-conductive cradle separator. Anti-adhesion graphite over assembled conductors.
<b>Inner sheath</b>	A special synthetic thermosetting compound type 5GM3 acc. to DIN VDE 0207/21, Red
<b>Anti-torsion braid</b>	Braid of polyamide threads between inner and outer sheath
<b>Outer sheath</b>	Special synthetic thermosetting compound, 5GM5 quality acc. to DIN VDE 0207/21 developed by TF Kable, Red

## FEATURES

<b>Rated Voltage <math>U_0/U</math></b>	3,6/6 kV	6/10 kV	8,7/15 kV	12/20 kV
<b>Max. operating voltage <math>U_m</math></b>	7,2 kV	12 kV	18 kV	24 kV
<b>AC test voltage</b>	11 kV	17 kV	24 kV	29 kV

- Partial discharge:  $1,25U_0/\max 20 \text{ pC}$
- Current carrying capacity: DIN VDE 0298-4
- Max. conductor operating temperature:  $+90^\circ\text{C}$
- Max. conductor temperature during short circuit:  $+250^\circ\text{C}$
- Minimum ambient temperature for fixed installation:  $-40^\circ\text{C}$
- Minimum ambient temperature for mobile installation:  $-25^\circ\text{C}$

Minimum bending radius acc. to DIN VDE 0298-3:

<b>Fixed installation</b>	6D
<b>On drums</b>	12D
<b>On deflection pulleys</b>	15D
<b>Moving freely</b>	10D

- Roller bending test
- Reeling test
- Twist limits:  $25^\circ/\text{m}$
- Travel speed up to: 180 m/min (Speeds above 180 m/min to be consulted with manufacturer)
- Tensile load: See table (Increased tensile load due to additional support elements)
- Excellent tear, impact and abrasion resistant outer sheath
- Flame propagation: PN-EN 60332-1-2, IEC 60332-1-2
- Oil resistant: PN-EN 60811-404, IEC 60811-404
- UV resistant: UL 2556, ISO 4892-2
- Ozone resistant: PN-ISO 1431-1

## APPLICATIONS

Specially designed flexible reeling cable with reduced dimensions for high mechanical stresses occur in applications with monospiral reels and cylindrical reels, extreme high reeling speed, torsional stress. Also for connection of large material handling machines such as excavators, dumpers, crushers in open-cast mines. For use in wet or dry conditions, in industrial units, in underground and open-cast mining, in explosion-risk areas.

<b>Standard length cable packing</b>	500 m on drums. Other forms of packing and delivery are available on request

## APPLICATIONS

Specially designed flexible cable for power mobile connections, for extremely high mechanical stresses. The cable is used in cable winding reels for winding and unwinding with co-occurrent tensile and torsion stress. Other applications include installation on conveyors, container cranes, harbour cranes, building machinery, handling machines for vertical reeling applications. For use in wet or dry conditions, in industrial units, in underground and open-cast mining, in explosion-risk areas.

## 3+3PE symmetrical construction

Based on: DIN VDE 0250-814

Low Voltage Rubber Flexible Cable for Vertical Reeling Applications

### DESIGN FEATURES

Conductors	Annealed flexible stranded tinned or bare copper conductor class 5 to IEC 60228. Special construction with optimized lay length.
Separator	If needed a suitable tape separator between the conductor and insulation.
Insulation	EPDM rubber, halogen-free, lead-free compound, type 3GI3 acc. to DIN VDE 0207/20, developed by TFCable
Color of insulation*	Colour coding of power conductors compliant to HD 308, DIN VDE 0293- 308 Power cores: 3-core circuit identification: Brown, black, grey Earth cores: Green-yellow
Earth conductor	Tinned or bare copper conductor rubber insulated
Core arrangement	Three power cores twisted together, earth conductor split into 3 parts and placed into the interstices.
Inner sheath	A special synthetic thermosetting compound type 5GM3 acc. to DIN VDE 0207/21, Yellow
Anti-torsion braid	Braid of polyamide threads between inner and outer sheath
Outer layer of sheath	Special synthetic thermosetting compound, 5GM5 quality acc. to DIN VDE 0207/21 developed by TFCable, Yellow

### FEATURES

Rated Voltage $U_0/U$	0,6/1 kV
Max. operating voltage $U_m$	1,2 kV

## APPLICATIONS

Specially designed flexible cable for signalling mobile connections, for extremely high mechanical stresses. The cable is used in cable winding reels for winding and unwinding with co-occurrent tensile and torsion stress. Other applications include installation on conveyors, container cranes, harbour cranes, building machinery, handling machines for vertical reeling applications. For use in wet or dry conditions, in industrial units, in underground and open-cast mining, in explosion-risk areas.

Standard length cable packing 500 m on drums.  
 Other forms of packing and delivery are available on request

Number of cores x cross-section	Conductor diameter	Approx. overall diameter	Approx. weight	Max. tensile load

Low Voltage Rubber Flexible Cable for Festoon Applications

## DESIGN FEATURES

<b>Conductors</b>	Annealed flexible stranded bare or tinned copper conductor class 5 acc. to IEC 60228.
<b>Separator</b>	If needed a suitable tape separator between the conductor and insulation.
<b>Insulation</b>	EPDM rubber, halogen-free, lead-free compound, type 3GI3 acc. to DIN VDE 0207/20, developed by TF Kable
<b>Circuit identification</b>	Colour coding of power conductors compliant to HD 308, DIN VDE 0293- 308 <b>-J version:</b> 3 - core: Green-yellow, blue, brown 4 - core: Green-yellow, brown, black, grey or green-yellow, blue, brown, black 5 - core: Green-yellow, blue, brown black, grey Above 5 cores: Green-yellow, other cores black with white numbering <b>-O version:</b> 3 - core: Brown, black, grey or blue, brown, black 4 - core: Blue, brown, black, grey 5 - core: Blue, brown, black, grey, black Above 5 cores: Black with white numbering
<b>Inner sheath</b>	A synthetic thermosetting compound type Gm1b acc. to DIN VDE 0207/21, Black
<b>Outer sheath</b>	Synthetic thermosetting compound, type 5GM3 acc. to DIN VDE 0207/21 developed by TF Kable, Black

## FEATURES

<b>Rated Voltage U<sub>0</sub>/U</b>	0,6/1kV
<b>Max. operating voltage U<sub>m</sub></b>	1,2 kV
<b>AC test voltage</b>	3 kV

- Current carrying capacity: DIN VDE 0298-4
- Max. conductor operating temperature: +90°C

- Max. conductor temperature during short circuit: +250°C
- Minimum ambient temperature for fixed installation: -40°C
- Minimum ambient temperature for mobile installation: -25°C

- Minimum bending radius acc. to DIN VDE 0298-3:

<b>OD of cable[mm]</b>	>8 ≤ 12	>12 ≤ 20	>20
<b>Fixed installation</b>	3D	4D	4D

## DESIGN FEATURES

<b>Conductors</b>	Special design ensuring higher flexibility. Annealed flexible stranded bare copper conductor: <ul style="list-style-type: none"> <li>Up to 25 mm<sup>2</sup> - extra flexible, class 6 acc. to IEC 60228</li> <li>Above 35 mm<sup>2</sup> - flexible, class 5 to IEC 60228.</li> </ul>
<b>Separator</b>	If needed a suitable tape separator between the conductor and insulation.
<b>Insulation</b>	Special EPDM rubber, halogen-free, lead-free compound, type 3GI3 quality, developed by TF Kable
<b>Circuit identification</b>	Colour coding of power conductors compliant to HD 308, DIN VDE 0293- 308 <b>-J version:</b> 3 - core: Green-yellow, blue, brown 4 - core: Green-yellow, brown, black, grey or green-yellow, blue, brown, black 5 - core: Green-yellow, blue, brown, black, grey Above 5 cores: Green-yellow, other cores black with white numbering  <b>-O version:</b> 3 - core: Brown, black, grey or blue, brown, black 4 - core: Blue, brown, black, grey 5 - core: Blue, brown, black, grey, black Above 5 cores: Black with white numbering
<b>Core arrangement</b>	Parallel, for more than 12 cores: parallel bundles
<b>Outer sheath</b>	Special, synthetic thermosetting compound, 5GM3 quality acc. to DIN VDE 0207/21 developed by TF Kable, Black

## FEATURES

Rated Voltage U <sub>0</sub> /U	300/500V
AC test voltage	2,5 kV

- Current carrying capacity: DIN VDE 0298-4

- Max. conductor operating temperature: +90°C
- Max. conductor temperature during short circuit: +250°C
- Minimum ambient temperature for fixed installation: -40°C
- Minimum ambient temperature for mobile installation: -25°C

- Minimum bending radius acc. to DIN VDE 0298-3:

Thickness of flat cable [mm]	>8 ≤ 12	>12 ≤ 20	>20
Fixed installation	3D	4D	4D
On drums	5D	5D	5D
On deflection pulleys	7,5D	7,5D	7,5D
Moving freely	4D	5D	5D

- Roller bending test
- Travel speed up to: 180m/min
- Tensile load: 15N/mm<sup>2</sup>
- Tear, impact and abrasion resistant outer sheath
- Flame propagation: PN-EN 60332-1-2, IEC 60332-1-2
- Oil resistant: PN-EN 60811-404, IEC 60811-404
- UV resistant: UL 2556, ISO 4892-2

Ozone resistant: PN-ISO 1431-1

Example of standard sheath marking:  
TF KABLE 3 TFCrane NGFLGÖU - J  
4x25 300/500V CE year + meter

## APPLICATIONS

Flexible flat cable designed for mechanical stresses, especially for applications with frequent bending during operation in one plane only. The cable is used on festoon systems and for connecting moveable parts of machine tools, material handling equipment.  
For use in wet or dry conditions, outdoors and indoors.

Standard length cable packing 500 m on drums.  
Other forms of packing and delivery are available on request

This manual contains information relevant to the handling of cables, including transport, storage, installation and maintenance. However, additional questions may arise, therefore we always encourage you to contact our team.

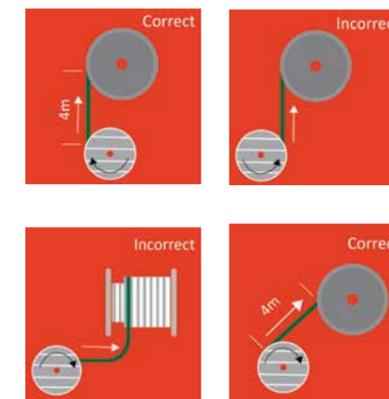

## TRANSPORTATION AND STORAGE

Be careful when transporting the drums to avoid damage to the cable or personal injury. Particular attention should be paid to the weight of the drum, as well as to the method and direction of turning and the lifting method. During storage, the drum flanges must not come into contact with the cable on the adjacent drum. If the storage temperature of cables is lower than recommended during installation, they should be protected against such mechanical loads as: shocks, knocks, bending or twisting. If the cable is not fully protected, for example by battens or plastic foil, it must be stored in a place protected from the weather. The ends of the cables should be sealed to prevent moisture penetration during transport and storage.

## INSTALLATION AND USE

### Cable installation

Generally, when the cable is installed onto a force guidance system through a reel or festoon, the delivery drum should be raised above the ground level. The recommended method of proceeding with installing the cable on site is to lift the delivery drum (original one) and then unwind the cable along its entire route. We perform this task using standard cable pulling tools and rollers. It happens that the environmental conditions do not allow us to perform these actions. Then you need to rewind the cable directly from the drum onto the drum / reel. This operation is also recommended when the location of the drum / reel and / or cable travel route are not available. In this case, „S“ -shaped deflections between the drum and the drum / reel should be avoided. Whenever possible, the cable should be rewound directly without going through or over the rollers and without changing direction. Direct scrolling from the delivery drum to the final drum / reel must be performed slowly and at the minimum tension. Doing so will prevent the cable from twisting during installation. The following instructions show the general rules for unwinding the cable. The correct method of installation should be done by unwinding the cable along the machine using a standard cable pulling system and rollers. If this is not possible due to the existing conditions, then the transfer should be carried out directly to the working drum while avoiding the cable bending and keeping the distance between the drums / reels at least 4m.

## Twist removal

If cable twisting will take place during transport or installation, it is recommended to eliminate it. The methods described below are recommended as the most effective to reduce it.

### Wave motion

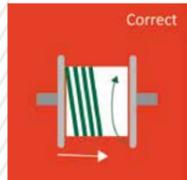

This method requires the involvement of two people who, holding the roller on which the cable is placed, move towards the free end of the cable, thereby shifting the „wave“ of the turn. This operation should be performed until the effect of turning is completely removed.

### Spiral method

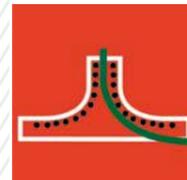

Removal of a twist by this method is performed by one person. To do this, create a spiral from the cable wound on the drum and roll / unscrew it to the free end of the cable. Depending on the turn, rolling / unscrewing should be done to the right or left. Repeat these steps if the turn has not been eliminated after the first attempt.

### Cable installation on cylindrical reels

Crane cables of the TFCrane series may be produced in a left, or right-hand direction, therefore we recommend to contact with TFK engineers to determine the direct way of winding. This will allow you to take advantage of the natural tendency of the cable to move to the left/right when it is rewound and keep the scrolls close to each other.

### Reducing the friction

For cables with a larger diameter it is recommended to use rollers that will reduce the friction of the coating during the change of the scrolling direction.

### Reels

Attention should be paid to the disadvantage of using the guide rollers which is the negative effect on the outer coating of the cable that is in contact with the roll profile. The contact surface is additionally increased if the rim profile has a hollow shape (basin). This is important because it significantly reduces the lifespan of the cable, therefore it is recommended to use a flat roller as shown in the graphics below.

Invalid roll profile.

In this case, the twisting effect is induced as a result of rolling the cable over the roll, which leads to its faster wear.

The correct roll profile.

The construction used in this way minimizes the twisting effect.

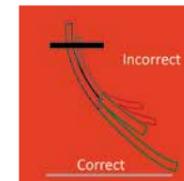

### Change of direction

At the stage of designing the cable winding system, appropriate distances should be assumed due to the change of the winding direction. The recommended distance should be equivalent to at least 20 times the cable diameter (or larger at high speed systems). This approach will allow the cable to recover its initial shape before the next rewinding.

### Cable guides

The next step after determining the winding system is the selection of cable guides. Their incorrect selection may lead to incorrect operation of the winding system. Among the available solutions, the best in use are guides that ensure large bending radii with minimal deflection of the cable. The arrangement of the guides should be in one axis with the cable tray. Any misalignment will lead to increased twisting of the cable.

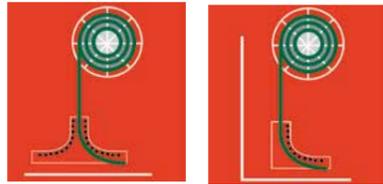

### Cable feeding point

The one-way guides are often used even for two-directional feeders for purely economic reasons. However, due to the significant extension of the cable life cycle, a better solution is to use two-way guides: in fact, the twisting and „massage“ effects transmitted by the cable guide are balanced using a symmetrical two-directional guide. The problem does not occur if the winding system is installed at the end. In this case, the one-way guide makes contact with the cable regardless of the direction of machine movement. The preferred solution is the use of two-directional guides or a multi-roll system. These solutions should be designed to hold the curve beyond the angle of deflection. In this way, the minimum bending radii are always maintained. It is also necessary to avoid sudden changes in the bending radius (this is often due to the insufficiently wide angle of the arc of the roller guide). These changes lead to local pressure and as a result to possible cable breakage.

## Cable feeding point

The cable should be fed at the center point above the cable guide, regardless of one or two-way guidance.

## Protection against too high or too low stress

It is strongly recommended that cable guiding systems include protective devices against both excessive and too low stress. Even short-term exposure to excessive stress caused by mechanical failure or accidents may cause the cable to stop working due to permanent deformation of the cores or break off. At the same time, the other way around it is desirable that the stresses are not too small so that the cable does not hang freely on the drum / reel. This protection is particularly important for high positioned cable drums / reels. All overload and underload protection devices should be set for maximum continuous safe operation at the working stresses defined for each section of the cable.

## Cable mesh grip

Optimal strain relief for the cable at the feed point. Safe and easy to use, where forces are spread over a larger surface to prevent damage to the cable.

## Cable reels/Drum types

Cable durability and efficiency is closely related to a properly designed winding system. A well-designed system together with a properly selected cable ensures optimal efficiency of the entire system, guaranteeing continuity of work and increased life and reliability. Today's market offers a wide range of winding systems, which are briefly described below.

## Monospiral reel

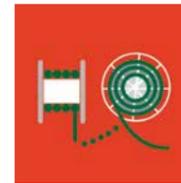

In the case of this type of cable drums, due to the better heat dissipation, the cross section of the power cable is generally smaller compared to other types of drums. The diameter and length of the cable are the main factors to consider when using monospiral drums: a well-saved balance between the inside and outside diameter of the reel / drum allows you to optimize and better control the cable tension.

## Cylindrical drum

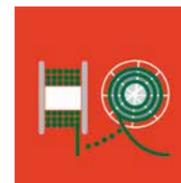

This solution is especially recommended for cables with large lengths and diameters. Its biggest advantage is the ability to drag a large amount of cable (with increased diameter) over long distances with constant tension.

It is important that the guide mechanism does not damage the cable during unrolling, for example, to prevent unusual friction against the surface of the spiral or irregular twist. It is recommended to use a maximum of two layers to allow thermal balance.

## Standard drum

It is the simplest and cheapest solution, but it does not guarantee full control over the cable layers and does not ensure proper operation at high speeds. There may be situations in which the cable is wound unevenly or only on one side, which can cause serious operational difficulties. This solution can only be recommended for cables with small diameters keeping in mind the mentioned work speed.
