FIRE SAFETY

There would be no contemporary civilization without fire. It has been discovered and coexists with human being since ages. On the one hand it provides great support, but on the other it carries enormous risk. In the last century due to the formation of large human settlements and changing the nature of development, the possibility of fire has increased. A factor in its development is often the material used to build houses, insecure use, and lack of appropriate alarm systems and quick response safety systems.

Only in 2006 in 37 selected countries for the population of 3.62 billion (55% of the world's population) were registered a total of up to 4 143 913 fires in which 42,291 people have been killed (source: CTIF 2008 - The international association of fire and rescue services). It is also estimated that the direct and indirect costs of all fires, including the economic impact of killed and wounded people, are nearly 1% of global GDP.

In Europe, each day after a fire 12 people on average are killed, and about 120 are seriously injured. Total economic losses are estimated at around 25 billion Euros per year (source: European Flame Retardants Association).

The most dangerous fires in respect of consequences are buildings fire events, mainly these within an urban agglomeration. This applies to places with high population density and points of interest such as:

- » Hospitals
- » Schools,
- » Shopping malls
- » Office buildings
- » Tunnels
- » Stadiums
- » Airports
- » Industrial sites.

Most fire hazards are created in these facilities due to a short circuit in electrical wiring, gas explosion or setting a fire by an accident. In these places a fire brigade intervenes most often.

There is number of tragic fires, where in recent years, the lack of adequate security system has caused loss of life and enormous material destruction.

Modern technologies used in construction involve the use of materials with improved fire resistance. If a fire occurs, the materials of which are built various structures and fire protection systems should enable people to safely evacuate, and quick extinguishing of the fire.

In the interest of public safety, the authorities on almost every level, pay attention to this aspect, which is reflected in the standards and EU directives and national regulations as well as local legislation.

Cables in the event of fire

The fire itself not only carries the risk of fire spread, but also the danger of the spread of smoke and toxic substances extremely hazardous to human life. Currently, the primary material used in the production of power cables, signal cables, control and measurement, and telecommunications is PVC - Polyvinyl chloride.

It is in several respects an ideal material for the manufacture of cables. Its mechanical properties combined with high reliability offer great opportunities for cable industry. However, in reaction to fire this polymer creates a huge risk. Fires in which the PVC is combusted are characterized by emission of large quantities of smoke, soot and toxic, corrosive substances. Already at the temperature of 120°C PVC releases hydrogen chloride (HCl) and dioxins and furans (PCDD and PCDF) - one of the most harmful substances recognized by toxicology.

The resulting large quantities of black smoke, toxic, corrosive gases and acids disable effective evacuation and greatly hinder the carrying out rescue operations.

To meet these dangers, Tele-Fonika Kable systematically develops range of alternative products manufactured

from halogen-free materials, materials made incombustible and fireproof.

Despite of the fact that the phenomenon of fire caused by the cables themselves is unheard, so very often happens the case that the fire covers the places where the cables are installed. In these extreme circumstances, it is expected that for some time there has been no interruption in energy supply, no interruption of signal for alarm points and devices, fire protection devices and devices complying with a key role in the safe evacuation.

The use of cables maintaining the circuit integrity during the fire, not emitting smoke and poisonous gases is a key issue not only for us as a producer, but for users of cable or alarm systems, both regarding to the personal safety of people and to protect equipment and property.

Security of cable routes

Safety and efficacy of the electrical installation in a fire depends on the type of cables used and the method of mounting and conducting the cable routes.

Currently, there is still no common European standard that specifies test methods throughout the entire cable route, so as binding rules are adopted the rules of research and classification according to German DIN 4102-12. This standard specifies requirements for fire testing of cables and systems for conducting with a common classification of E30 (keeping the system functions for 30 minutes in a fire) and E90 (keeping the system functions for 90 minutes in a fire).

Observation of phenomena occurring during the fire tests can unequivocally state that electrical installations are safe only if the correct choice of cable elements and strict adherence to the recommendations of manufacturers of cable systems are kept.

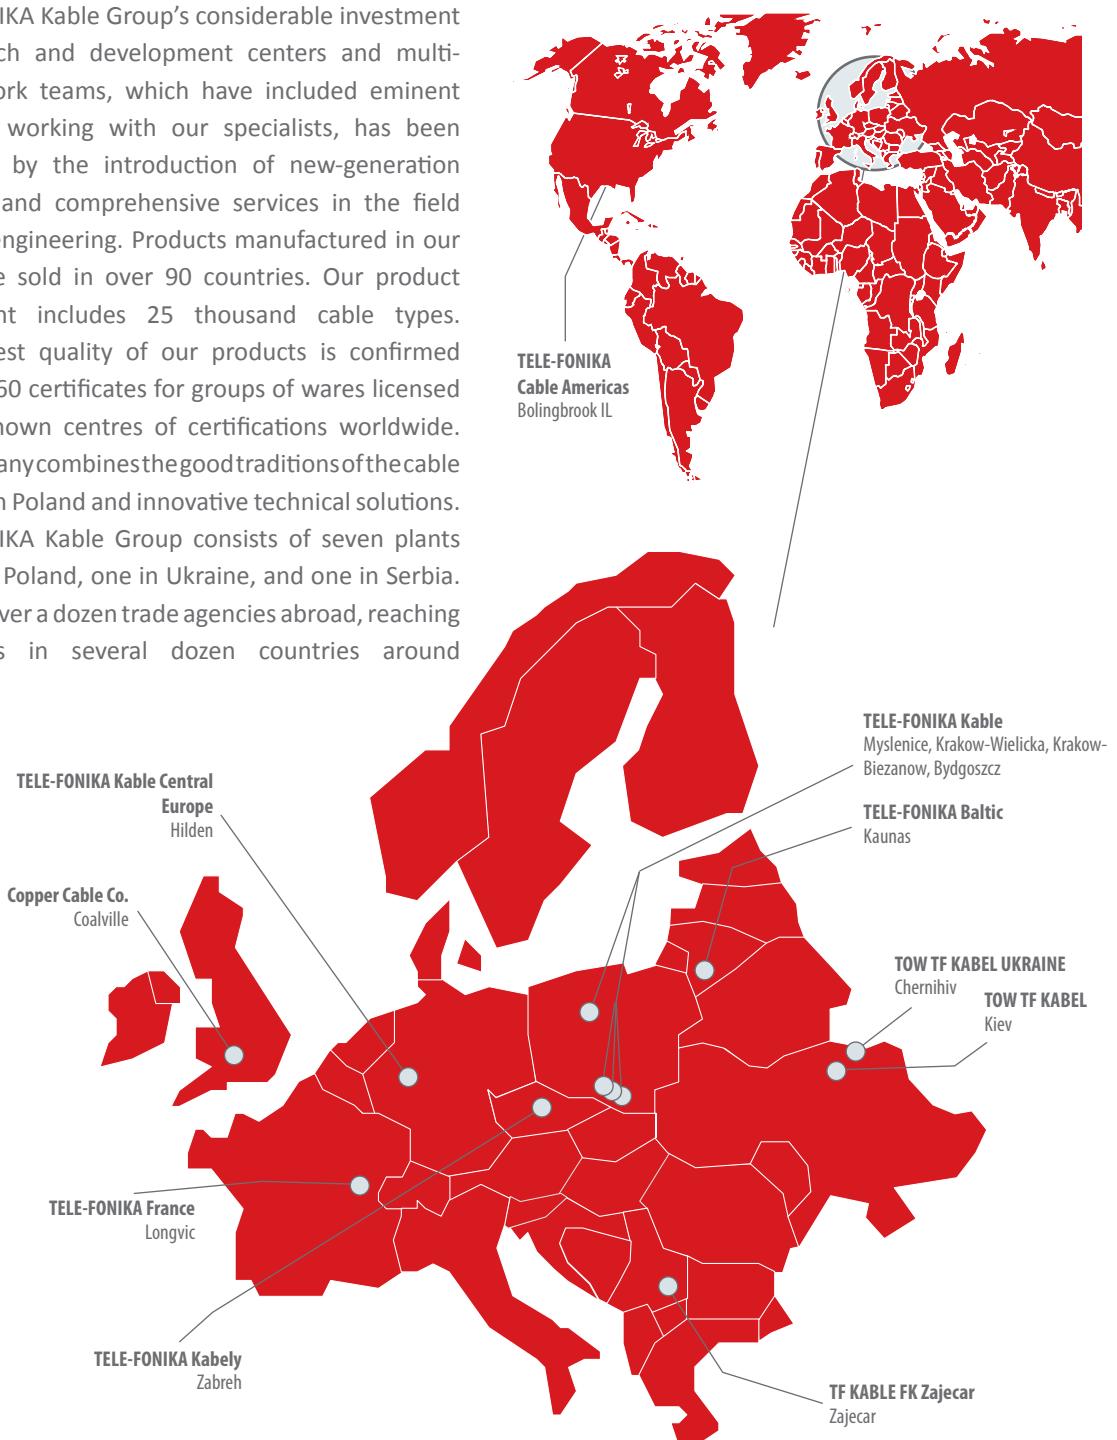

The continuity of energy supply and signal is determined equally by quality of used cables and other components, and by the method of cables installation.

To ensure the implementation of a comprehensive solution for safe installation, Tele-Fonika Kable has performed fire tests of its cables together with the best producers of cable elements.

TELE-FONIKA Kable

The Group TELE-FONIKA Kable (TF Kable) is ranked in the forefront of the global cable industry. The Group is the third manufacturer of cables and wires in Europe with significant development potential, based entirely on Polish capital.

TELE-FONIKA Kable Group's considerable investment in research and development centers and multi-skilled work teams, which have included eminent scientists working with our specialists, has been rewarded by the introduction of new-generation products and comprehensive services in the field of cable engineering. Products manufactured in our plants are sold in over 90 countries. Our product assortment includes 25 thousand cable types. The highest quality of our products is confirmed by over 460 certificates for groups of wares licensed by 34 renown centres of certifications worldwide. The company combines the good traditions of the cable industry in Poland and innovative technical solutions. TELE-FONIKA Kable Group consists of seven plants — four in Poland, one in Ukraine, and one in Serbia. We own over a dozen trade agencies abroad, reaching customers in several dozen countries around the world

PRODUCTION POTENTIAL

Our chief asset is extensive technological know-how in the field of production of wide variety of cables and wires supported by our experienced personnel. Our products match to a great extent the general trends concerning ecology and maintenance safety of wares. Extremely strict legislation in these areas has become the indicator of the technological progress of the manufactured cables.

Kraków-Wielicka Plant

Kraków-Wielicka Plant was established in 1928. In 1992, it received the ISO 9002 certificate (now ISO 9001) and in 1998 the ISO 14001 given by the British certification body: BASEC. The plant specializes in the production of rubber insulated cables and wires for mining and industrial applications. All types of rubber mixes used for EPR, CR, EVA and CSP cables are based on an original prescription designed together with research and development centres. The production offer of the plant are also medium voltage cables made in XLPE technology, as well as signal and control wires for special purposes.

Kraków-Bieżanów Plant

Kraków-Bieżanów Plant was established in 2001. In 2002, it received the ISO 9001 certificate and 14001 given by the British certification body: BASEC. The plant specializes in the production of overhead conductors from alloyed aluminium, conductors for railway traction network from copper and its alloys and installation wires for general usage.

Bydgoszcz Plant

Bydgoszcz Plant started production of cables and wires back in 1923. In 1992, it received the ISO 9002 certificate (now ISO 9001) and in 1998 the ISO 14001 given by the British certification body: BASEC. Bydgoszcz Plant specializes in power supply cables of medium and high voltage up to 400 kV. It is equipped with six modern chain lines for crosslinking polyethylene in XLPE technology. Complementary technological lines for producing the abovementioned cables ranging from thick wire drawing machines, cable stranding machines and screening machines to covering lines and two large-size high voltage laboratories called "Faraday cage" place the plant in the top of the list of the largest production centres of medium and high voltage cables in Europe.

Myślenice Plant

Myślenice Plant was established in April 1992 under the name Zakłady Kablowe TELE-FONIKA s.c. In 1995, it received the ISO 9001 certificate and in 1999 the ISO 14001 certificate. The certification body is BASEC. In September 2007 the plant received the ISO/TS 16949 certificate for automotive cables given by the certification body: SGS. Myślenice Plant specializes in the production of copper and fibre optic telecommunication cables, computer cables and automotive wires.

TOW TF Kabel (Ukraine)

The plant was established in 2002. In 2007, the plant was joined into the TELE-FONIKA Kable Group. This Plant is certified according to ISO 9001 and 14001. It specializes in the production of overhead conductors and cables for voltage up to 1 kV, including halogen-free, fire resistant and flame retardant cables versions.

TF Kable Fabrika Kablova Zajecar A.D. (Serbia)

The plant was established in 1974. In 2007, the plant was joined into the TELE-FONIKA Kable Group. This plant is certified according to ISO 9001 and 14001 by DAS Certification Ltd. It specializes in the production of low and medium voltage cables, as well as halogen-free, fire resistant and flame retardant cables, telecommunication cables and PVC and polyethylene-coated conductors.

LEADING STANDARDS, TESTING AND REGULATIONS

Fire-resistant cables, also known as safety cables or function cables are widely used in the building and construction industry as part of a fire protection systems. Like any other halogen-free cables HFFR-type, these cables are also characterized by limited flame spread during the fire and reduced smoke emissions (especially corrosive gases). However, their crucial role in the fire safety system is to maintain circuit integrity during a fire, within a specified period of time.

On the basis of the experience arising from research which have been implemented over the behaviour of the cables at the time of the fire and security-related research related to fire safety in buildings, there was developed a number of national and international standards for the construction of cables and determining the way of their testing and acceptance criteria.

IEC 60331-11

Apparatus - Fire alone at a temperature of flame of at least 750 ° C

IEC 60331-12

Apparatus - Fire with shock at a flame temperature of at least 830 ° C

IEC 60331-21

Test for electric cables under fire conditions - Circuit integrity. Procedures and requirements - Cables of rated voltage up to and including 0.6 / 1 kV

IEC 60331-23

Tests for Electric Cables under Fire Conditions - Circuit Integrity. Procedures and Requirements - Electric Data Cables

IEC 60331-25

Tests for Electric Cables under Fire Conditions - Circuit Integrity - Part 25: Procedures and Requirements - Optical Fibre Cables

IEC 60331-31

Test for electric cables under fire conditions and shock-Circuit integrity. Procedures and requirements for Fire with Shock - Cables of rated voltage up to and including 0.6 / 1 kV

TEST DESCRIPTION

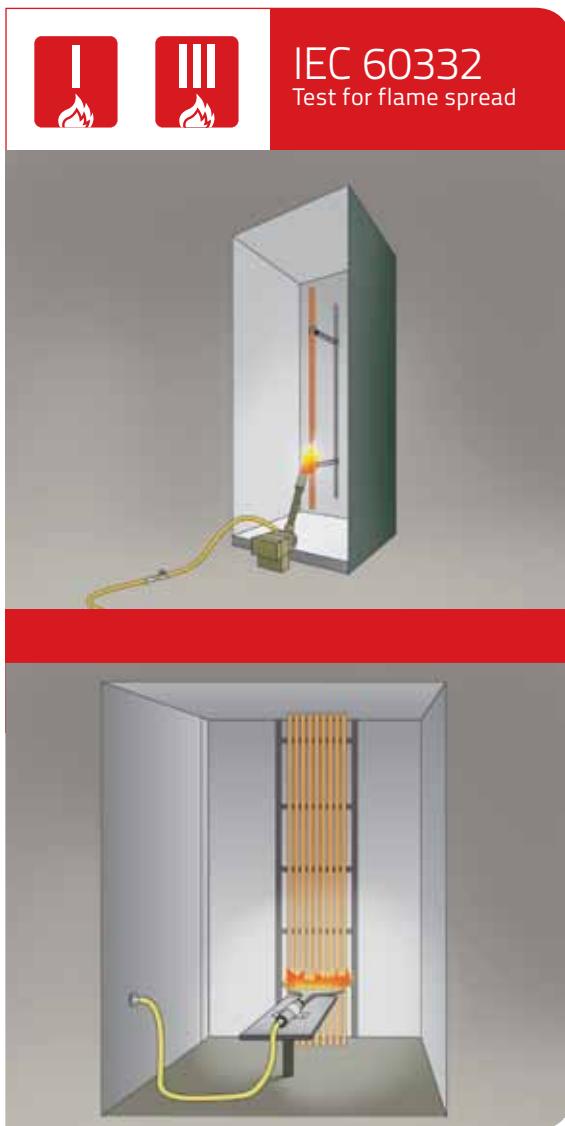

Part 60331-21. A sample of the cable length of 1200 mm sustained by two metal rings is mounted horizontally in a special ventilated cabin. During the test, to the wire cores of cable a voltage of the nominal value is applied (for telecommunication cables equal to 110 V), thereby creating a closed electric circuit. The sample is subjected to an action of linear gas burner with a length of 500 mm and the flame temperature equal to 750 ° C till 800 ° C. The time of the fire is 180 minutes. Result of the test is considered positive if at that time will not be considered a short circuit in the circuit being researched.

Part 60331-31 applies to the cables with a diameter greater than 20mm², and introduces the standards and

procedures for testing of cables exposed to fire and mechanical shock (equipment according to 60331-12).

The test sample provides cable fragment length at least 1500 mm. Bent wire on the U-shaped with a radius equal to the smallest permissible by the manufacturer, is mounted on a metal assay ladder. During the study,

through all the cable wires is passed current with rated voltage and these cables are subjected to fire during 120 min, where fire source is a gas burner set in conformity with standards, as well the mechanical shock of the 5 minutes interval. Result of the test is considered positive if at that time will not be considered a short circuit in the circuit being tested.

IEC 60332-3-23

Tests on electric and optical fibre cables under fire conditions - Part 3-23: Test for vertical flame spread of vertically-mounted bunched wires or cables - Category B

IEC 60332-3-24

Tests on electric and optical fibre cables under fire conditions - Part 3-24: Test for vertical flame spread of vertically-mounted bunched wires or cables - Category C

IEC 60332-3-25

Tests on electric and optical fibre cables under fire conditions - Part 3-25: Test for vertical flame spread of vertically-mounted bunched wires or cables - Category D

TEST DESCRIPTION

Part 1 (IEC 60332-1)

Flame spread test on single cable

A cable sample provides an isolated section of cable with a length of 600 mm placed in a metal enclosure, open in front. To sample shall be applied at an angle the

source of fire produced by a burner powered by technical propane (95% nominal purity).

The burner should be set at 45 degrees so that the tip of the internal cone of blue flame touches the sample at a distance of 475 mm from the bottom of the upper bracket.

Time of application of the flame depends on the diameter of the tested sample. After completion of the test burner must be removed, and extinguish the flame.

If after removal of the fire source will not be visible charring or other damages on a distance of not less than 50 cm from the bottom edge of the upper clamp, the result of test is therefore considered positive.

Part 3 (IEC 60332-3)

Flame spread test on a bundle of cables

To vertical ladder affixed in adapted chamber is fasten a certain number of cable sections with a length of

3.5 m. The amount of combustible materials for cables and duration of flame application depends on the category the cable has to meet.

Category A

7 litres/m of combustible materials for cables
- the time of application of the flame 40 min

Category B

3.5 litres/m of combustible materials for cables
- the time of application of the flame 40 min

Category C

1.5 litres/m of combustible materials for cables
- the time of application of the flame 20 min

Resistance of the wires bundle arranged vertically to the spread of the flame should be such that after a certain time and stopping the source of ignition, flame was extinguished by itself and the length of charred fragments did not exceed 2.5 m in height measured above the lower edge of the burner.

IEC 61034 Smoke density test

IEC 61034-1

Measurement of Smoke Density of Cables Burning Under Defined Conditions - Part 1: Test Apparatus

IEC 61034-2

Measurement of smoke density of cables burning under defined conditions - Part 2: Test procedure and requirements

TEST DESCRIPTION

The cable sections are burned in a special cabin in the shape of a cube measuring 3x3x3m with installed on opposite walls the photometric measuring system 100W light source placed at a height of 2.15 m. Photometric measuring system registers the light transmission in the cabin. The result is considered positive if the light trans-lucency after testing is not less than 60%

IEC 60754-1

Test on Gases Evolved During Combustion of Materials from Cables - Part 1: Determination of the Amount of Halogen Acid Gas

IEC 60754-2

Test on Gases Evolved During Combustion of Electric Cables, Part 2: Determination of Degree of Acidity of Gases Evolved During the Combustion of Materials Taken from Electric Cables by Measuring pH and Conductivity

TEST DESCRIPTION

Part 1

Small (1 g) fragmented sample is placed in a quartz tube and gradually heated in the tube furnace to 800 °C and then maintained at this temperature for 20 minutes. Into

the pipe shall be blown an air of a certain flow rate, which, after leaving the tube, is guided to the scrubbers. For aqueous solutions of gases evolved during combustion of the material sample and collected in the scrubbers the halogen acid content is estimated on the basis of analytical method. The test result is considered positive if the acid content is less than 0.5%.

Part 2

The test is performed at least on 1 gram of sample of insulation material and outer coating and any other non-metallic substances in the cable. Furnace is heated to a temperature of 935 °C min, after which it is placed in a quartz tube with a sample of the material inside. Certain amount of non-metallic substances of cable is burnt in the tube furnace for approximately 30 minutes. The resulting gases are guided by air blow-trough to scrubbers with distilled water. Solutions obtained in this way are measured in respect of acidity (pH) and conductivity. The test result is considered positive if the pH acidity of the solutions is less than 4.3 and the conductivity is not greater than 10 mS/mm.

The test apparatus consists of the following devices:

- Place of burning of approximately 170 mm length
- Air flow meter
- Two bottles, to which released gas is drained, including one bottle with two entered electrodes.
- Gas from cylinder synthetic air
- PH Meter
- Conductivity meter

TEST DESCRIPTION

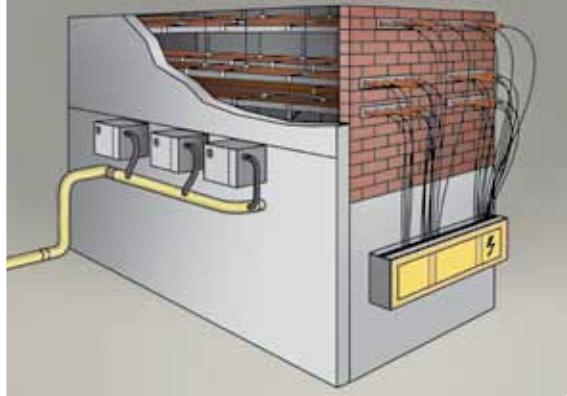

In the adapted chamber is mounted a cable sample with a length of 1200 mm, to which wire cores during the test a nominal value voltage is applied, creating thereby a closed circuit. During the test the cable is subjected to actions of the fire at conventional temperature 842 °C and mechanical stroke for a specified period of time. The measured time of proper functioning of the cable corresponds to the so-called cable fire resistance class PH, which is also mentioned in the standard PN-B-02851-1 - Fire resistance tests of elements of buildings (Test method for thin wires with an outside diameter not greater than 20 mm).

- | | | |
|---------------|-------|-----|
| PH 15 | - 15 | min |
| PH 30 | - 30 | min |
| PH 60 | - 60 | min |
| PH 90 | - 90 | min |
| PH 120 | - 120 | min |

DIN 4102-12

Cable system integrity test

Maintaining the function of electrical cable during the fire, defined as the concept of cable systems is characterized by the German DIN 4102, part 12.

This is one of the most rigorous criteria for cables that in the best way simulates the actual conditions prevailing during the fire.

The test stand has dimensions 2m/3m/2.5 (width/length/height) and meets the standard DIN 4102-2.

The minimum length of the sample should be 3 m.

Classes of functions maintenance according to DIN 4102-12

E30 - cable system function maintenance in case of fire for 30 minutes

E60 - cable system function maintenance in case of fire for 60 minutes

E90 - cable system function maintenance in case of fire for 90 minutes

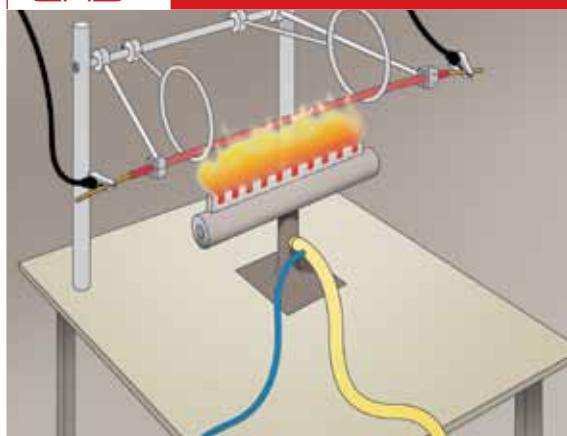

TEST DESCRIPTION

The test conditions described in this standard shall be considered as the most rigorous as it was yet discussed, but on the other hand, as most closely related to real fire conditions. The standard defines testing the functionality of so-called cable set, which consists of a group set of power cables, telecommunications, data transfer, etc. to be installed in real conditions, fixed to the provided to apply support structure consisting of channels, ladders, items to hang, handles, etc. Cables attached to this structure are powered by their work voltage, and when testing can arise neither short-circuit of insulation nor break the continuity of any wire core. The classification of cable set as a whole to one of three classes determines the duration of the cables operation in temperature provided at test conditions: Class E30 - 30 minutes at 820 °C, the class E60 - 60 minutes at 870 °C, the class E90 - 90 minutes at 980 °C. It is worth noting that duration of the cable operation under test is determined not only by design and selection of used cable materials, but also and often primarily, the construction and selection of supporting structure materials, which is subject to deformation in high temperatures, and these deformations in turn tighten the cables attached to the structure.

BS 6387

Category C

1. Fire resistance test is a test in which the cable is exposed to the fire of a strictly defined temperature in a specific time. The study provides the basis for four categories:

Category A

the cable sample is burned at a temperature of 650 °C for 3 hours

Category B

the cable sample is burned at a temperature of 750 °C for 3 hours

Category C

cable sample is burned at 950 °C for 3 hours

Category S

cable sample is burned at 950 °C for 20 minutes

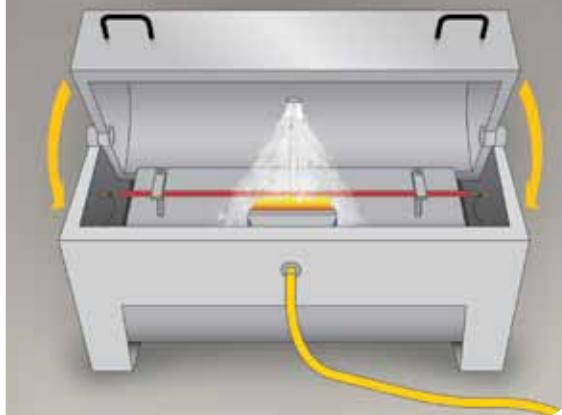

TEST DESCRIPTION

Cables test according to standard BS 6387 is carried out in three stages:

1. Fire resistance test cat. C
2. Testing for fire and water resistance cat. W
3. Testing for fire resistance and mechanical stroke cat. Z

BS 6387
Category W

2. Testing for resistance to fire and water - Category W - is a study in which the cable is exposed to a fire at a temperature of 650 °C for 15 minutes and then for another 15 minutes to fire with water that is poured over the area around the cable.

F2

BS 7846
Category test

Fire and mechanical test in which the cable is exposed to the fire of a strictly defined temperature and impact of metal bar in a specific period of time.

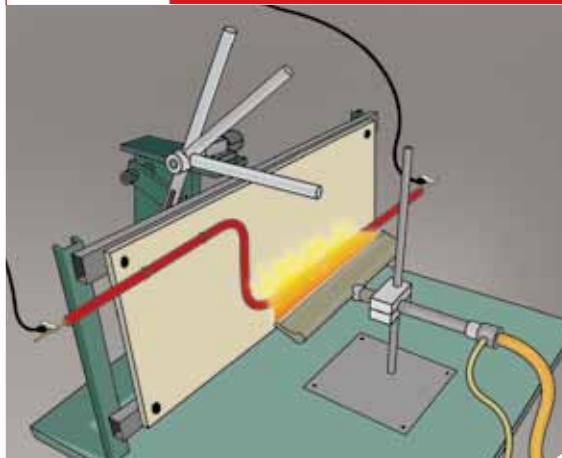

TEST DESCRIPTION

Cable test according to BS 7846 standard is carried out by two stages:

1. Fire test, by exposing cable sample to direct fire
2. Impact test, by exposing cable sample to direct hit by metal bar.

BS 6387
Category Z

3. Testing for resistance to fire and mechanical stroke - a study in which the cable is exposed to a fire at a specified temperature with a mechanical stroke. The test takes 15 minutes. The test provides a basis to distinguish three categories:

Category X - the cable sample is burned at a temperature of 650 °C and subjected to mechanical shock

Category Y - cable sample is burned at a temperature of 750 °C and subjected to mechanical shock

Category Z - cable sample is burned at 950 °C and subjected to mechanical shock

F120

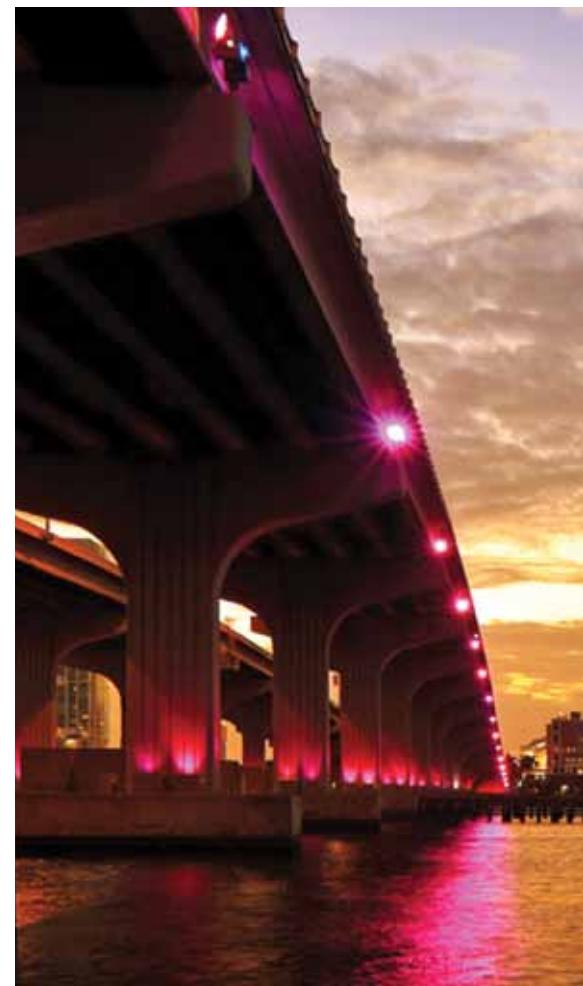

BS 8491
Category test

Fire, water and mechanical test in which the cable is exposed to the fire of a strictly defined temperature, impact of metal bar and impact of water, all in a specific time. The test is passed, when cable after 120 minutes is still working.

TEST DESCRIPTION

Cable test according to BS 8491 standard is carried out in three stages:

1. Fire test, by exposing cable sample to direct fire for 120 min
2. Impact test, by exposing cable sample to direct hit by metal bar,
3. Water test, by exposing cable sample to direct hit by defined amount of water

Fire Resistant, Flame Retardant, Halogen Free, Low Smoke Cables and Wires

Cables are manufactured with the use of halogen-free materials. These materials exhibit better fire performance, have improved resistance to flame propagation and can extinguish flame spread through the cable.

Application:

Halogen-free cables are used for applications in public buildings, where fire would present a significant hazard to human life as a result of emission of toxic gasses and dense smoke hampering the evacuation or when the losses caused by the corrosive acid gasses would be higher than other damage caused by fire.

Locations of increased fire safety requirements, where large agglomeration of people and cultural or material goods of high value are present: schools, hospitals, shopping centers, airports, hotels, supermarkets, underground tunnels, multi-storey buildings, stations of underground railways, underground garages, sports and show halls, stadiums, cinemas, theatres, museums, office buildings, educational centers, industrial complexes.

Tested and approved by:

VDE (Verband der Elektrotechnik)

BASEC (British Approvals Service For Cables)

LPCB (Loss Prevention Certification Board)

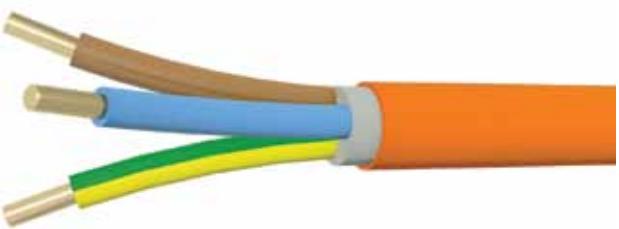

CNBOP (Centrum Naukowo-Badawcze Ochrony Przeciwpożarowej)

BBJ (Biuro Badawcze ds. Jakości) - Znak Bezpieczeństwa „B”

In order to improve product identification, TF Kable is adopting new name for FLAME-X 950 products. Table below depicts the amendment:

Old name	New name
Flame-X 950 Single	Flame-X 950 SERIES 1
Flame-X 950 Standard	Flame-X 950 SERIES 2
Flame-X 950 Enhanced	Flame-X 950 SERIES 2e

FIRE PERFORMANCE

Insulation integrity FE 180:	DIN VDE 0472-814 (800°C, 180 min.), IEC 60331-21
System integrity E30:	DIN 4102-12 (30 min.)
Flame propagation:	DIN EN 60332-3-22, VDE 0482-332-3-22, IEC 60332-3-22
Smoke density:	DIN EN 61034-2, VDE 0482-1034-2, IEC 61034-2
Gases evolved during combustion:	DIN EN 50267-2-2, VDE 0482-267-2-2, IEC 60754-2: pH ≥ 4,3; conductivity ≤ 10 µS/mm

CONSTRUCTION

Conductors:	bare copper conductor, circular solid class 1 (RE) or stranded circular or circular compacted class 2 (RM) according to EN 60228
Insulation:	special cross-linked halogen-free fire resistant silicone compound
Inner covering:	special flame-retardant and halogen-free compound
Sheath:	thermoplastic halogen-free compound type HM4 according to DIN VDE 0276-604
Colour of sheath:	orange

CHARACTERISTIC

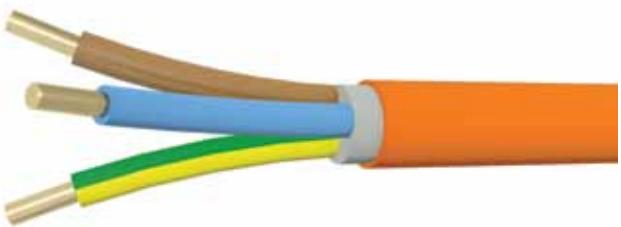

Core identification:	according to DIN VDE 0293-308, HD 308 S2 or EN 50334
	(N)HXH-O FE180/E30

*For certain applications only.	
Maximum conductor operating temperature:	+90°C
Lowest ambient temperature for fixed installation:	-40°C
Lowest installation temperature:	-15°C
Maximum short-circuit conductor temperature:	+250°C
Minimum bending radius:	15D - for single core cable; 12D - for multicore cable (D - overall cable diameter)
Maximum permissible tensile stress with cable grip for Cu-conductor:	50 N/mm ²
Application:	Fire resistant security cables for installation everywhere where high safety requirements have a special significance e.g., in industrial complexes, power stations, public buildings, hotels, underground railway systems, hospitals etc.
Standard packing:	500 m on drums. Other forms of packing and delivery are available on request.

Halogen-free low smoke fire resistant security power cables

FIRE PERFORMANCE

Insulation integrity FE 180:	DIN VDE 0472-814 (800°C, 180 min.), IEC 60331-21
System integrity E30:	DIN 4102-12 (30 min.)
Flame propagation:	DIN EN 60332-3-22, VDE 0482-332-3-22, IEC 60332-3-22
Smoke density:	DIN EN 61034-2, VDE 0482-1034-2, IEC 61034-2
Gases evolved during combustion:	DIN EN 50267-2-2, VDE 0482-267-2-2, IEC 60754-2: pH ≥ 4,3; conductivity ≤ 10 µS/mm

CONSTRUCTION

Conductors:	bare copper conductor, circular solid class 1 (RE) or stranded circular or circular compacted class 2 (RM) according to EN 60228
Primary insulation:	a suitable wrapping of mica tape with a glass cloth
Insulation:	special fire resistant cross-linked compound
Inner covering:	special flame-retardant and halogen-free compound
Sheath:	thermoplastic halogen-free compound type HM4 according to HD 604 S1

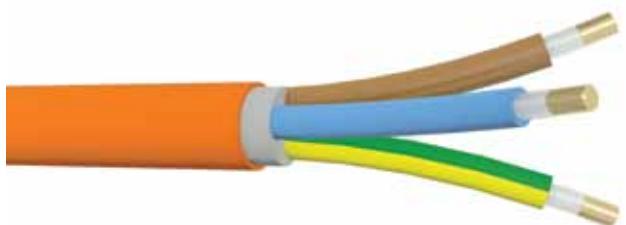

CHARACTERISTIC

Colour of sheath:	orange
Core identification:	according to HD 308 S2
	NHXH-O FE180/E30 NHXH-J FE180/E30
	without protective conductor with protective conductor
1-core:	black
2-core:	blue, brown
3-core:	brown, black, grey
4-core:	blue, brown, black, grey
5-core:	blue, brown, black, grey, black

	green-yellow, blue, brown
	green-yellow, brown, black, grey
	green-yellow, blue, brown, black, grey
	green-yellow, others cores black with numbering
Maximum conductor operating temperature:	+90°C
Lowest ambient temperature for fixed installation:	-40°C
Lowest installation temperature:	-15°C
Maximum short-circuit conductor temperature:	+250°C
Minimum bending radius:	15D - for single core cable; 12D - for multicore cable (D - overall cable diameter)
Maximum permissible tensile stress with cable grip for Cu-conductor:	50 N/mm ²
Application:	Fire resistant security cables for installation everywhere where high safety requirements have a special significance e.g., in industrial complexes, power stations, public buildings, hotels, underground railway systems, hospitals etc.
Standard packing:	500 m on drums. Other forms of packing and delivery are available on request.

Halogen-free low smoke fire resistant security power cables with copper concentric conductor

FIRE PERFORMANCE

Insulation integrity FE 180:	DIN VDE 0472-814 (800°C, 180 min.), IEC 60331-21
System integrity E30:	DIN 4102-12 (30 min.)
Flame propagation:	DIN EN 60332-3-22, VDE 0482-332-3-22, IEC 60332-3-22
Smoke density:	DIN EN 61034-2, VDE 0482-1034-2, IEC 61034-2
Gases evolved during combustion:	DIN EN 50267-2-2, VDE 0482-267-2-2, IEC 60754-2: pH ≥ 4,3; conductivity ≤ 10 µS/mm

CONSTRUCTION

Conductors:	bare copper conductor, circular solid class 1 (RE) or stranded circular or circular compacted class 2 (RM) according to EN 60228
Insulation:	special fire resistant cross-linked compound
Inner covering:	special flame-retardant and halogen-free compound
Concentric conductor:	inner layer - round copper wires, outer layer - copper tape
Separator:	tape
Sheath:	thermoplastic halogen-free compound type HM4 according to DIN VDE 0276-604

CHARACTERISTIC

Colour of sheath:	orange
Core identification:	according to HD 308 S2 or EN 50334
2-core:	blue, brown
3-core:	brown, black, grey
3 core:*	blue, brown, black
4-core:	blue, brown, black, grey
≥ 7-core:	black with numbering
*For certain applications only.	
Maximum conductor operating temperature:	+90°C
Lowest ambient temperature for fixed installation:	-40°C
Lowest installation temperature:	-15°C
Maximum short-circuit conductor temperature:	+250°C
Minimum bending radius:	15D - for single core cable; 12D - for multicore cable (D - overall cable diameter)
Maximum permissible tensile stress with cable grip for Cu-conductor:	50 N/mm ² , (total cross-section of the conductors, any screen not included)
Application:	Fire resistant security cables for installation everywhere where high safety requirements have a special significance e.g., in industrial complexes, power stations, public buildings, hotels, underground railway systems, hospitals etc.
Standard packing:	500 m or 1000m on drums. Other forms of packing and delivery are available on request.

Halogen-free low smoke fire resistant security power cables with copper concentric conductor

FIRE PERFORMANCE

Insulation integrity FE 180:	DIN VDE 0472-814 (800°C, 180 min.), IEC 60331-21
System integrity E90:	DIN 4102-12 (90 min.)
Flame propagation:	DIN EN 60332-3-22, VDE 0482-332-3-22, IEC 60332-3-22
Smoke density:	DIN EN 61034-2, VDE 0482-1034-2, IEC 61034-2
Gases evolved during combustion:	DIN EN 50267-2-2, VDE 0482-267-2-2, IEC 60754-2: pH ≥ 4,3; conductivity ≤ 10 µS/mm

CONSTRUCTION

Conductors:	bare copper conductor, circular solid class 1 (RE) or stranded circular or circular compacted class 2 (RM) according to EN 60228
Insulation:	special fire resistant cross-linked compound
Inner covering:	special flame-retardant and halogen-free compound
Concentric conductor:	inner layer - round copper wires, outer layer - copper tape
Separator:	tape
Sheath:	thermoplastic halogen-free compound type HM4 according to DIN VDE 0276-604

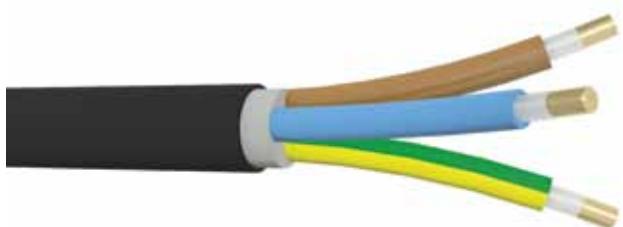

CHARACTERISTIC

Colour of sheath:	orange
Core identification:	according to HD 308 S2 or EN 50334
2-core:	blue, brown
3-core:	brown, black, grey
3 core:*	blue, brown, black
4-core:	blue, brown, black, grey
5-core:	blue, brown, black, grey, black
≥ 7-core:	black with numbering
*For certain applications only.	
Maximum conductor operating temperature:	+90°C
Lowest ambient temperature for fixed installation:	-40°C
Lowest installation temperature:	-15°C
Maximum short-circuit conductor temperature:	+250°C
Minimum bending radius:	15D - for single core cable; 12D - for multicore cable (D - overall cable diameter)
Maximum permissible tensile stress with cable grip for Cu-conductor:	50 N/mm ² , (total cross-section in mm ² of the conductors (any screen not included))
Application:	Fire resistant security cables for installation everywhere where high safety requirements have a special significance e.g., in industrial complexes, power stations, public buildings, hotels, underground railway systems, hospitals etc.
Standard packing:	500 m on drums. Other forms of packing and delivery are available on request.

Halogen-free low smoke fire resistant security power cables

FIRE PERFORMANCE

Flame retardant:	IEC 60332-3-24 Category C
Smoke density:	IEC 61034-2
Gases evolved during combustion:	IEC 60754-2: pH ≥ 4,3; conductivity ≤ 10 µS/cm
Insulation integrity under flame propagation:	IEC 60331-21

CONSTRUCTION

Conductors:	bare annealed copper conductor, solid circular class 1 or stranded circular or shaped class 2 acc. to EN 60228
Primary insulation:	a suitable wrapping of mica tape with a glass cloth
Insulation:	cross-linked polyethylene
Inner covering:	special flame-retardant and halogen-free compound
Sheath:	thermoplastic halogen - free compound type ST ₈ acc. to IEC 60502-1

CHARACTERISTIC

Colour of sheath:	Black (available also in Orange)
Core identification:	HD 308 S2

	without protective conductor-O	with protective conductor-J
1-core	black	green-yellow
2-core	blue, brown	-
3-core:	brown, black, grey	green-yellow, blue, brown
4-core:	blue, brown, black, grey	green-yellow, brown, black, grey
5-core:	blue, brown, black, grey, black	green-yellow, blue, brown, black, grey
7 and more:	numbering	green-yellow, other cores with numbering

Maximum conductor operating temperature:	+90°C
Lowest ambient temperature for fixed installation:	-40°C

Lowest installation temperature:	-5°C
Maximum short-circuit conductor temperature:	+250°C

Minimum bending radius:	12 x D (D is the overall diameter of the cable)
Maximum permissible tensile stress with cable grip for Cu-conductor:	50 N/mm ²

Application:	Fire resistant security cables for installation everywhere where high safety requirements have a special significance e.g., in industrial complexes, power stations, public buildings, hotels, underground railway systems, hospitals etc.
Standard length cable packing:	500 or 1000m on drums. Other forms of packing and delivery are available on request.

Halogen-free, low smoke, fire resistant security power cables with copper concentric conductor

FIRE PERFORMANCE

Insulation integrity FE 180:	DIN VDE 0472-814 (800°C, 180 min.), IEC 60331-21
System integrity E90:	DIN VDE 4102-12 (90 min.)
Flame propagation:	DIN EN 60332-3-22, VDE 0482-332-3-22, IEC 60332-3 -22
Smoke density:	DIN VDE 0472-1034-2, IEC 61034-2
Gases evolved during combustion:	VDE 0482-267-2-2, DIN EN 50267-2-2 , IEC 60754-2: pH ≥ 4,3; conductivity ≤ 10 µS/mm

CONSTRUCTION

Conductors:	bare copper conductor, circular solid class 1 (RE) or stranded circular or circular compacted class 2 (RM) acc. to EN 60228
Primary insulation:	A suitable wrapping of mica tape with a glass cloth
Insulation:	special cross-linked compound
Inner covering:	special flame-retardant and halogen-free compound
Concentric conductor:	inner layer - round copper wires, outer layer - copper tape
Separator:	tape
Sheath:	thermoplastic halogen-free compound type HM4 acc. to DIN VDE 0276-604

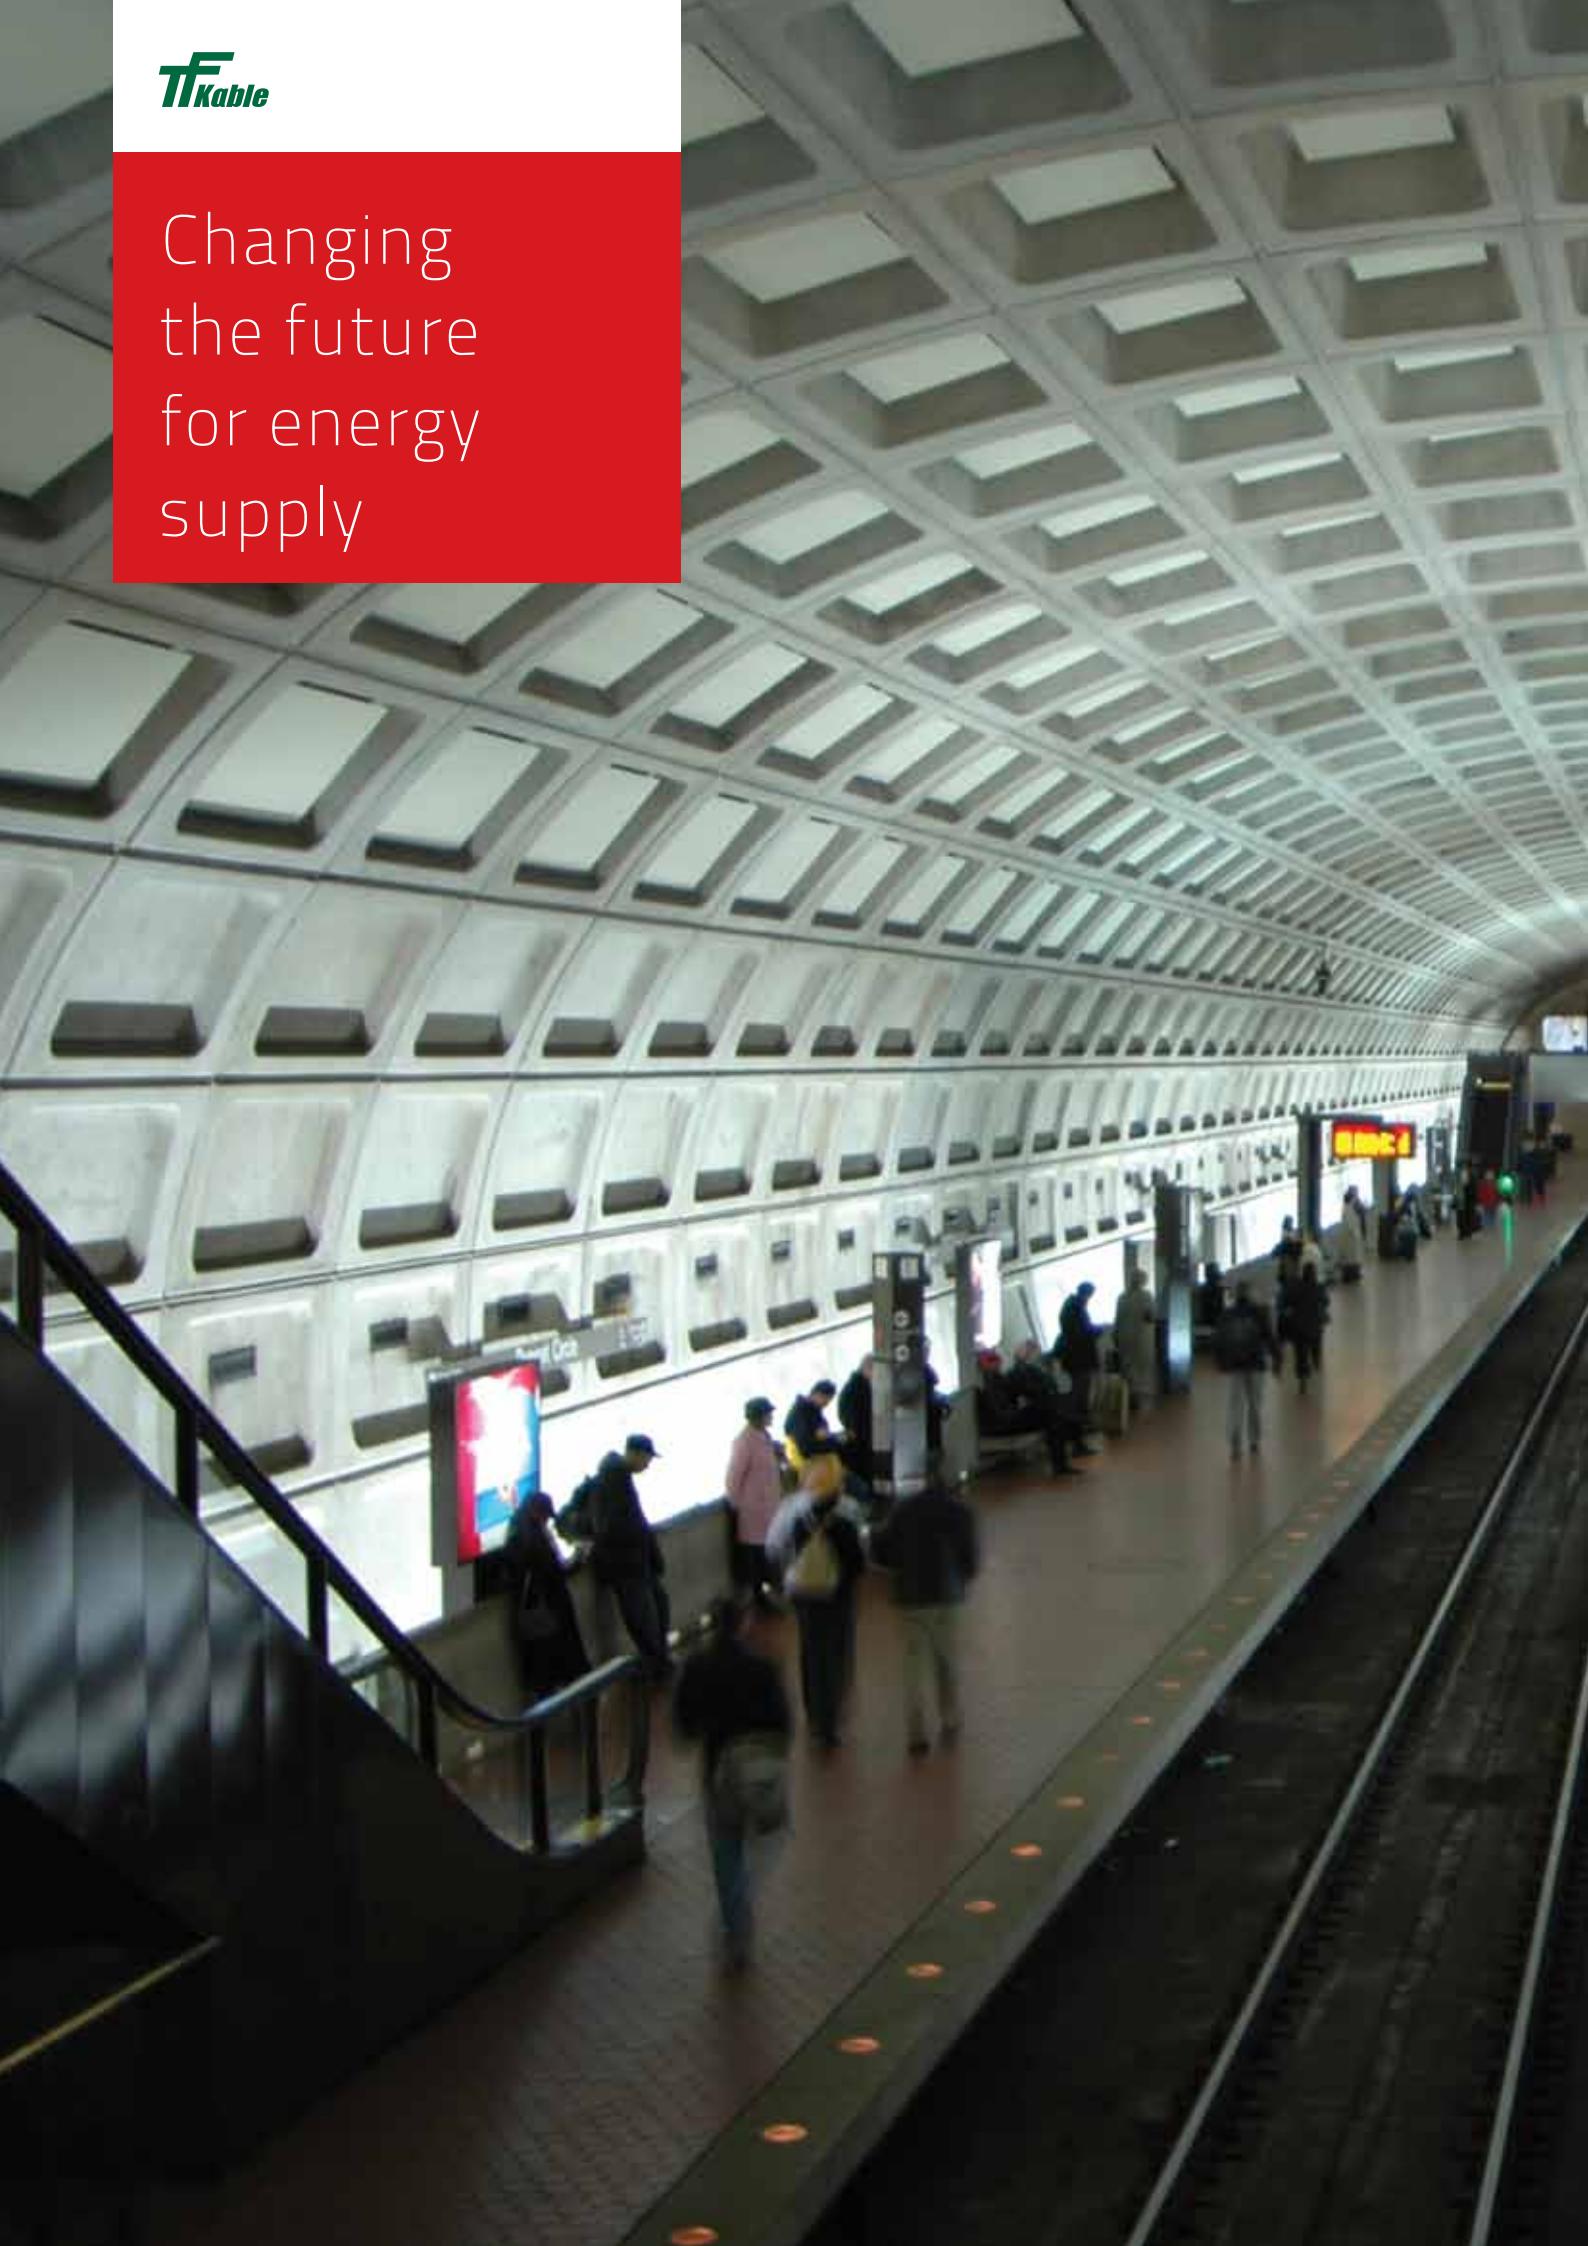

CHARACTERISTIC

Colour of sheath:	orange
Core identification:	acc. to HD 308 S2
2-core:	blue, brown
3-core:	brown, black, grey
3 core.*	blue, brown, black
4-core:	blue, brown, black, grey
5-core:	blue, brown, black, grey, black
≥ 7-core:	black with numbering
Maximum conductor operating temperature:	+90°C
Lowest ambient temperature for fixed installation:	-40°C
Lowest installation temperature:	-15°C
Maximum short-circuit conductor temperature:	+250°C
Minimum bending radius:	15 x D - for single core cable; 12 x D - for multicore cable (D is the overall diameter of the cable)
Maximum permissible tensile stress with cable grip for Cu-conductor:	50 N/mm ² , calculated for the nominal sum of cross-sections of the inner conductors; the cross-section of the concentric conductors not be considered.
Application:	Fire resistant security cables for installation everywhere where high safety requirements have a special significance e.g., in industrial complexes, power stations, public buildings, hotels, underground railway systems, hospitals etc.
Standard packing:	500 m on drums. Other forms of packing and delivery are available on request.

supply

Single core non-sheathed fire resistant cable having low emission of smoke and corrosive gases when affected by fire

FIRE PERFORMANCE

Fire resistance:	IEC 60331-21, tested 90 min. at 950°C and BS 6387 category C, W, Z
Flame propagation:	EN 60332-1-2
Smoke emission:	EN 61034-2
Corrosive and acid gas emission:	BS EN 60754-1, HCl content < 0,5 % BS EN 60754-2, pH ≥ 4,3 conductivity ≤ 10 µSmm ⁻¹

CONSTRUCTION

Conductors:	circular or compacted circular, stranded, annealed copper conductor, class 2 according to BS EN 60228
Primary insulation:	a suitable wrapping of mica tape with a glass cloth
Insulation:	special thermosetting LSOH compound of EI5 type according to BS EN 50363-5

CHARACTERISTIC

Core identification:	green/yellow, blue, black, brown, grey, red, yellow. Other colours are available on special request.
Maximum conductor operating temperature:	+90°C
Lowest installation temperature:	-5°C
Maximum short-circuit conductor temperature:	+250°C
Application:	for use in fixed installations, where cable is protected by conduit or trunking. Fire resistant cables intended to provide circuit integrity in case of fire.
Standard packing:	100 m in coils or on spools, or 500 m on drums. Other forms of packing and delivery are available on request.

* Installation reference method 3 (enclosed in conduit on a wall or in trunking etc.) as per BS 7671, Appendix 4. Conductor operating temperature 90°C, ambient temperature 30°C.

** Installation reference methods 3 and 4 (enclosed in conduit, etc. in or on a wall) as per BS 7671, Appendix 4. Conductor operating temperature 90°C, ambient temperature 30°C.

**Standard level fire
resistant electric
cables having low
emission of smoke
and corrosive gases
when affected by fire**

FIRE PERFORMANCE

Fire resistance:	BS 6387 Category C, W, Z BS EN 50200 Class PH30 (resistance to fire, with mechanical shock and with water: 30 min) BS 5839-1:2002 Clause 26.2d PH 30 Standard fire resistant cable
Flame propagation:	BS EN 60332-1-2 and BS EN 60332-3-22
Smoke emission:	BS EN 61034-2
Gases evolved during combustion:	BS EN 60754-1, HCl content < 0,5 % BS EN 60754-2, pH ≥ 4,3 conductivity ≤ 10 µSmm ⁻¹

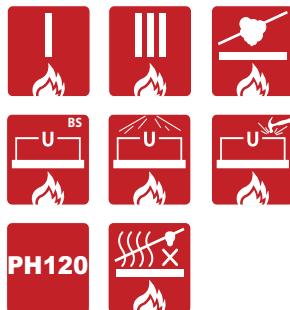

CONSTRUCTION

Conductors:	plain annealed copper solid class 1 (for 1 - 2,5 mm ²) and stranded class 2 (for 4 mm ²) according to BS EN 60228
Uninsulated circuit protective conductor:	tinned annealed copper of the same nominal cross-sectional area and of the same class as the insulated conductors
Drain wire	tinned annealed copper wires class 2 acc. to BS EN 60228 (for cables with 7, 12,19-cores)
Insulation:	special cross-linked heat resistant compound according to BS EN 50363.1
Optional binder:	non hygroscopic halogen free tape
Screen:	aluminium/polyester laminated tape and uninsulated circuit protective conductor
Outer sheath:	thermoplastic zero halogen low smoke compound according to BS 7655-6.1

CHARACTERISTIC

Colour of sheath:	red or white (other colours are permissible when agreed with the manufacturer)
Core identification:	2 core + ECC: brown, blue 3 core + ECC: brown, blue, grey 4 core + ECC: blue, brown, black, grey 7, 12, 19 – core + Drain wire: numbering or for identification by colour: in each layer: brown (starting core), black (reference core)
Maximum conductor operating temperature:	+70°C
Lowest temperature ambient for fixed installation:	-30°C
Lowest installation temperature:	0°C
Maximum short-circuit conductor temperature:	+250°C
Minimum bending radius:	6D (D - is the overall cable diameter)
Application:	Standard level fire resistance cables in accordance with recommendations of BS 5839-1:2002 clause 26.2. Tested and approved by BASEC and LPCB. For use in Installations emergency lighting and evacuation systems, fire and smoke detection systems air-conditioning and alarm systems, automatic elevator doors, computer control rooms, emergency evacuation communicators.
Standard packing:	500 m on drums. Other forms of packing and delivery are available on request.

**Enhanced grade fire
resistant cables
having low emission
of smoke and
corrosive gases when
affected by fire**

FIRE PERFORMANCE

Complies with the PH 120 ENHANCED fire resistant cable described in Clause 26.2 of BS 5839-1:2002

Fire resistance:

BS 6387 Category C,W,Z
BS EN 50200 Class PH 120

BS 8434-2 duration 120 min (60 min for the fire 930°C and impact and 60 min for the fire 930°C, impact and water)

Flame propagation:

BS EN 60332-1-2 and BS EN 60332-3-22

Smoke emission:

BS EN 61034-2

Gases evolved during combustion:

BS EN 60754-1, HCl content < 0,5 %
BS EN 60754-2, pH ≥ 4,3 conductivity ≤ 10 µSmm⁻¹

CONSTRUCTION

Conductors:

plain annealed copper solid class 1 (for 1 - 2,5 mm²) and stranded class 2 (for 4 mm²) according to BS EN 60228

Primary insulation:

fire resistant mica tape with a glass cloth

Uninsulated circuit protective conductor:

tinned annealed copper of the same nominal cross-sectional area and of the same class as the insulated conductors

Insulation:

glass impregnated mica tape and special cross-linked heat resistant compound type EI2 according to BS EN 50363.1

Optional binder:

non hygroscopic halogen free tape

Screen:

aluminium/polyester laminated tape and uninsulated circuit protective conductor

Outer sheath:

thermoplastic zero halogen low smoke compound type LTS 3 according to BS 7655-6.1

CHARACTERISTIC

Colour of sheath:

red or white (other colours are available on special request)

Core identification:

2 core + ECC: brown, blue
3 core + ECC: brown, blue, grey
4 core + ECC: blue, brown, black, grey

Maximum conductor operating temperature:

+70°C

Lowest temperature ambient for fixed installation:

-30°C

Lowest installation temperature:

0°C

Maximum short-circuit conductor temperature:

+250°C

Minimum bending radius:

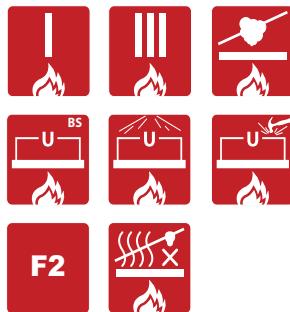

6D (D - overall cable diameter)

for use in Installations emergency lighting and evacuation systems, fire and smoke detection systems air-conditioning and alarm systems, automatic elevator doors, computer control rooms, emergency evacuation communicators. Recommended for systems, in particular building types, in which cables might need to operate correctly during a fire for periods in excess of those normally required for single phase evacuation of a building. Cables meeting the enhanced requirement should be used in buildings greater than 30 m in height, or with four or more evacuation zones, or for example hospitals, where there are progressive horizontal evacuation arrangements, or where a risk assessment identifies a possible need.

Standard packing:

500 m on drums. Other forms of packing and delivery are available on request.

Fire resistant security power cable having low emission of smoke and corrosive gases when affected by fire

FIRE PERFORMANCE

Fire resistance:	BS 7846 Category F2 BS 6387 Category C, W, Z
Flame propagation:	BS EN 60332-1-2 and BS EN 60332-3-24
Smoke density:	BS EN 61034-2
Corrosive and acid gases emission:	BS EN 60754-1, HCl content < 0,5% BS EN 60754-2, pH ≥ 4,3 & conductivity ≤ 10 µSmm ⁻¹

CONSTRUCTION

Conductors:	circular, circular compacted or shaped, stranded, annealed copper conductor, class 2 acc. to BS EN 60228
Primary insulation	a suitable wrapping of mica tape with a glass cloth
Insulation:	cross-linked polyethylene (XLPE) of GP8 type acc. to BS 7655-1.3
Bedding:	special low smoke zero halogen filling compound (only 2, 3, 4 cores)
Outer sheath:	thermoplastic LSOH compound of LTS1 type acc. to BS 7655-6.1

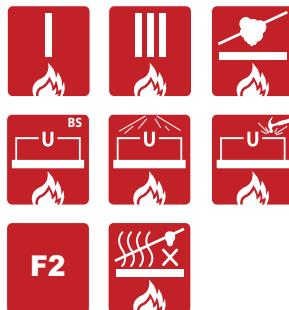

CHARACTERISTIC

Nominal voltage	0,6/1 kV		
Colour of sheath:	black (other colours available on special request)		
Core identification:	1-core 2-core 3-core 4-core	with green-yellow green-yellow - green-yellow, blue, brown green-yellow, brown, black, grey	without green-yellow black brown, blue brown, black, grey blue, brown, black, grey
Maximum conductor operating temperature:	+90°C		
Lowest installation temperature	-5°C		
Maximum short-circuit conductor temperature:	+250°C		
Minimum bending radius:	6D - for cables with circular copper conductors and 8D - for cables with shaped copper conductors; (D - overall cable diameter)		
Application:	Fire resistant cables for use in fixed installations in industrial areas, public buildings (as for example power plants, hospitals, shopping centres, theatres) and similar applications where maintenance of power supply during a fire is required for a defined period of time.		
Standard packing:	500 or 1000m on drums. Other forms of packing and delivery are available on request

Armoured fire resistant electric power cable having low emission of smoke and corrosive gases when affected by fire

FIRE PERFORMANCE

Fire resistance:	Category F2 according to BS 7846, BS 6387 – Category C,W, Z
Flame propagation:	BS EN 60332-1-2, BS EN 60332-3-22
Low smoke emission:	BS EN 61034-2
Low corrosive and acid gas emission:	BS EN 60754-1, HCl content < 0,5% BS EN 60754-2, pH ≥ 4,3 & conductivity ≤ 10 µSmm ⁻¹

CONSTRUCTION

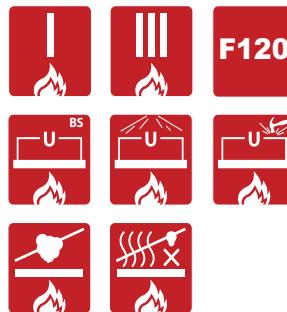

Conductors:	circular, circular compacted or shaped, stranded, annealed copper conductor, class 2 according to BS EN 60228
Primary insulation:	a suitable wrapping of mica tape with a glass cloth
Insulation:	cross-linked polyethylene (XLPE) of GP8 type according to BS 7655-1.3
Bedding:	LSOH (special low smoke zero halogen compound)
Armour:	single layer of galvanized steel wires applied helically over the bedding
Outer sheath:	thermosetting LSOH compound of LTS1 type according to BS 7655-6.1

CHARACTERISTIC

Colour of the sheath:	black. Other colours are available on special request.
Core identification:	
2-core:	brown, blue
3-core:	brown, black, grey
4-core:	blue, brown, black, grey
Maximum conductor operating temperature:	+90°C
Lowest installation temperature:	0°C
Maximum short-circuit conductor temperature:	+250°C
Minimum bending radius:	6D for cables with circular copper conductors and 8D for cables with shaped copper conductors; D – overall cable diameter
Application:	for use in fixed installations in industrial areas, public buildings (as for example power plants, hospitals, shopping centres, theatres) and similar applications where maintenance of power supply during a fire is required for a defined period of time.
Standard packing:	500 m on drums. Other forms of packing and delivery are available on request.

Number and CSA of conductor	Nominal thickness of insulation	Nominal thickness of outer sheath	Nominal diameter of armour wires	Approx. overall diameter	Approx. net weight of cables	Maximum conductor resistance at 20°C	Current rating single phase AC or DC		Voltage Drop DC	Voltage Drop single phase AC

Armoured fire resistant electric power and control cable having low emission of smoke and corrosive gases when affected by fire

FIRE PERFORMANCE

Fire resistance:	BS 7846 Category F120 BS 6387 Category C, W, Z
Flame propagation:	BS EN 60332-1-2 and BS EN 60332-3-24
Smoke density:	BS EN 61034-2
Corrosive and acid gases emission:	BS EN 60754-1, HCl content < 0,5% BS EN 60754-2, pH ≥ 4,3 & conductivity ≤ 10 µSmm ⁻¹

CONSTRUCTION

Conductors:	circular, circular compacted or shaped, stranded, annealed copper conductor, class 2 acc. to BS EN 60228
Primary insulation	fire resistant mica tape with a glass cloth
Insulation:	cross-linked polyethylene (XLPE) of GP8 type acc. to BS 7655-1.3
Cable core:	insulated conductors twisted together wrapped in fire resistance tape (optional also by polyester film)
Bedding:	thermoplastic zero halogen low smoke compound (LSOH) wrapped in fire resistant tape
Armour	galvanized steel wires applied helically (optional polyester film over the armour)
Outer sheath:	thermoplastic zero halogen low smoke compound of LTS1 type acc. to BS 7655-6.1

CHARACTERISTIC

Colour of sheath:	black (other colours available on special request)	
Core identification:	2-core 3-core 4-core 5-core	brown, blue brown, black, grey blue, brown, black, grey green and yellow, blue, brown, black, grey
Maximum conductor operating temperature:	+90°C	
Lowest installation temperature:	0°C	
Minimum operating temperature after installation without movement:	-40°C	
Maximum short-circuit conductor temperature:	+250°C	
Minimum bending radius:	6D - for cables with circular copper conductors and 8D - for cables with shaped copper conductors; (D - overall cable diameter)	
Application:	Fire resistant armoured cables for use in fixed installations in industrial areas, public buildings (as for example power plants, hospitals, shopping centres, theatres) and similar applications where maintenance of power supply during a fire is required for a defined period of time.	
Standard packing:	500 or 1000m on drums. Other forms of packing and delivery are available on request	

¹⁾ Category C, W, Z for cables up to and including 95mm². Category C for cables above and including 120mm².

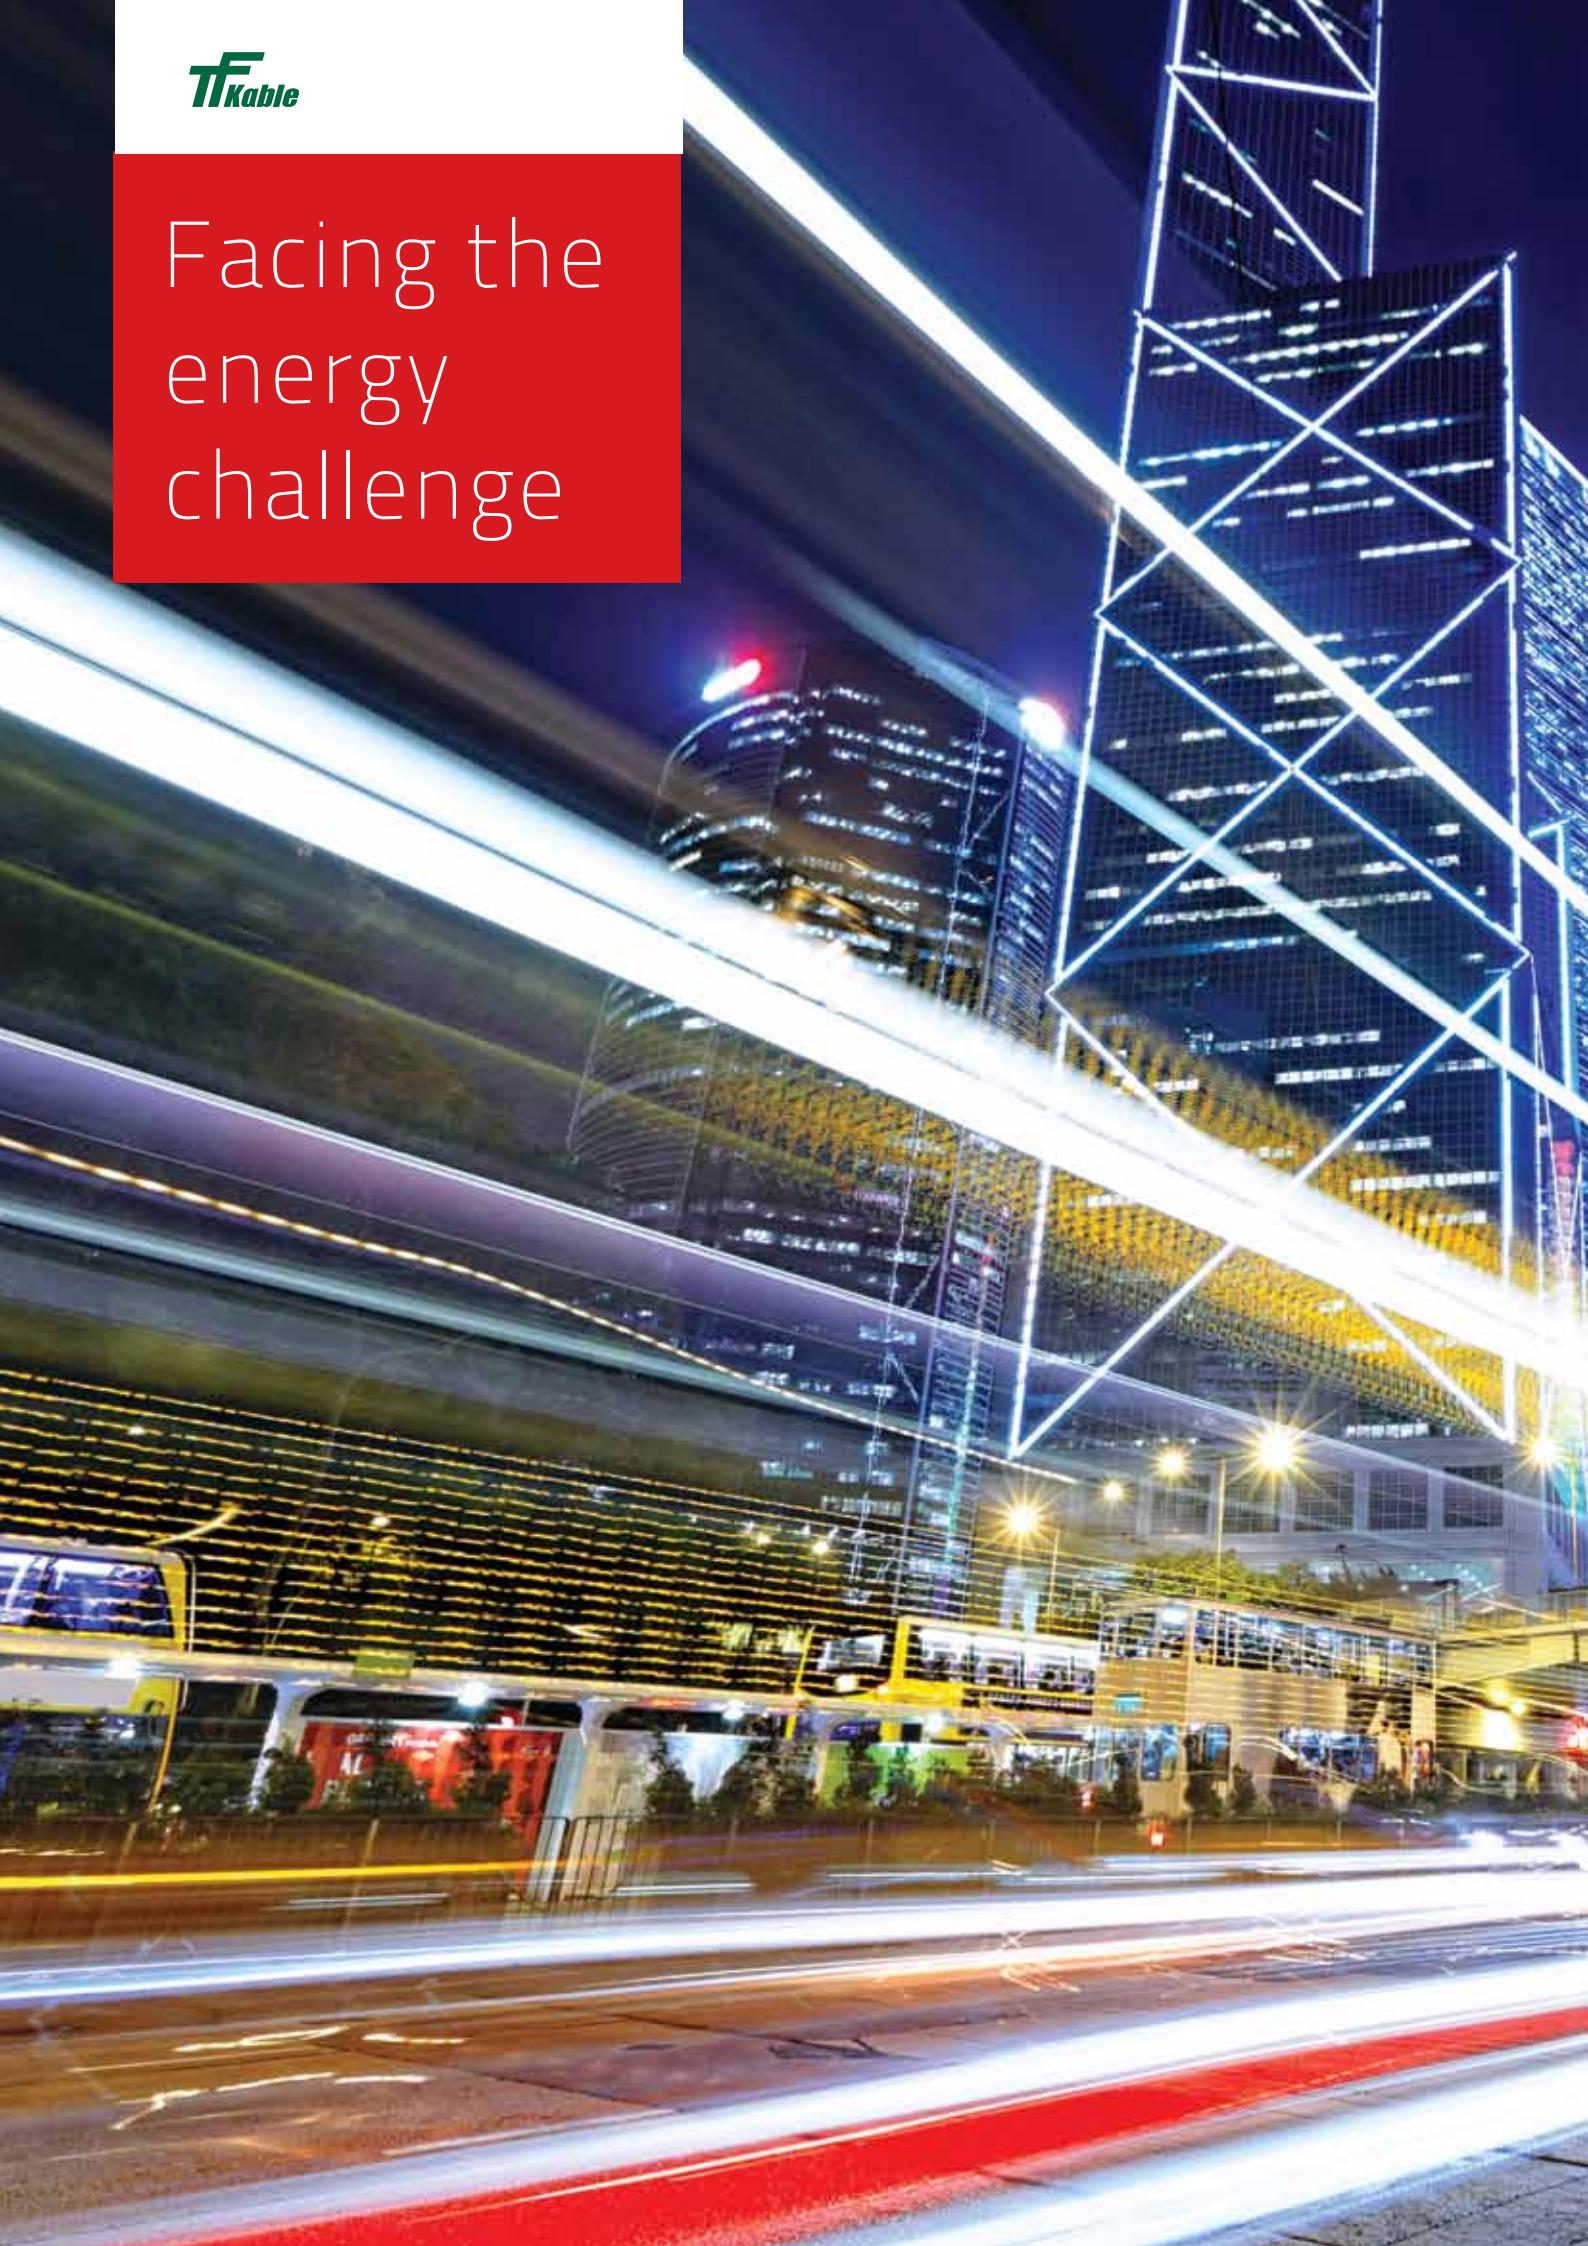

²⁾ BS EN 60754-1 & BS EN 60754-2 standards replace BS EN 50267-2-1

Facing the energy challenge

**Flexible
fire resistant
power & control
cables**

FIRE PERFORMANCE

Flame retardant:	AS/NZS 1660.5.1; IEC 60332-3-22 Cat. A; IEC 60332-1
Cable circuit integrity:	AS/NZS 1660.5.5; IEC 60331; BS 6387, Cat. C,W,Z
Wiring system circuit integrity:	AS/NZS 3013, Cat. WS52W
Smoke density:	AS/NZS 1660.5.2; IEC 61034-2
Halogen acid gas content:	AS/NZS 1660.5.3, IEC 60754-1
Gases evolved during combustion:	AS/NZS 1660.5.4, IEC 60754-2

CONSTRUCTION

Conductors:	Flexible bare copper wire stranding; class 5 according to IEC 60228 and AS/NZS 1125
Flame Barrier:	Glass mica tape with glass cloth
Insulation:	Cross-linked, halogen-free, flame retardant compound type X-HF-110 acc. to AS/NZS 3808
Sheath:	Flexible, thermoplastic, low smoke, halogen-free compound having reduced flame propagation when exposed to a fire, type HFS-110-TP acc. to AS/NZS 3808

CHARACTERISTIC

Colour of sheath:	Red RAL 3000. Other colours are available on special request.
	the colouring for identification may be within the mass not at the surface of the core insulation
Core identification:	1-core: red or green-yellow 2-core: red, white 2-core + earth: red, black, green-yellow 3-core + earth: red, white, blue, green-yellow 4-core + earth: red, white, blue, black, green-yellow 6-core + earth: green-yellow, others cores white with black numbers
Maximum continuous operating temperature:	110°C
Flexibility for easy of installation	
Minimum bending radius:	8D (D – overall cable diameter)
Application:	Mica and cross-linked halogen-free flame retardant insulated and halogen-free thermoplastic compound sheathed flexible, enhanced fire resistant cables for use in installations emergency lighting and evacuation systems, fire and smoke detection systems air-conditioning and alarm systems, automatic elevator doors, computer control rooms, emergency evacuation communicators. Recommended for systems, in particular building types, in which cables might need to operate correctly during a fire for periods in excess of those normally required for single phase evacuation of a building.
Standard length cable packing:	500 or 1000m on drums. Other forms of packing and delivery are available on request.

More than
just a cable
supplier

Halogen-free low smoke fire resistant cables

FIRE PERFORMANCE

Fire resistance:	IEC 60331: 3h at 750°C EN 50200 – PH 90 (for cables with overall diameter ≤ 20 mm) BS 6387 Category C – resistance to fire: 3 h at 950°C Category W – resistance to fire with water: 15 min at 650°C plus 15 min with water spray Category Z – resistance to fire with mechanical shock: 15 min at 950°C
Flame propagation:	IEC 60332-3-22 Category A, (EN 60332-3-22)
Smoke emission:	IEC 61034-2, BS EN 61034-2:
Gases evolved during combustion:	IEC 60754-1, EN 50267-2-1: < 0,5% acid gas IEC 60754-2, EN 50267-2-2: pH ≥ 4,3; conductivity ≤ 10 µS/mm ⁻¹

TYPE OF FLAME-X 950 CABLES:

HDGs	cable with solid copper conductors (D), special cross-linked silicone compound insulation (Gs) and thermoplastic halogen-free outer sheath (H)
HLGs	cable with stranded copper conductors (L), special cross-linked silicone compound insulation (Gs) and thermoplastic halogen-free outer sheath (H)
HLgGs	cable with stranded flexible copper conductors (Lg), special cross-linked silicone compound insulation (Gs) and thermoplastic halogen-free outer sheath (H)
HDGsekwf	cable with solid copper conductors (D), special cross-linked silicone compound insulation (Gs) and thermoplastic halogen-free outer sheath (H), with electrostatic screen of aluminium/polyester laminated tape (ekwf)
HLGsekwf	cable with stranded copper conductors (L), special cross-linked silicone compound insulation (Gs) and thermoplastic halogen-free outer sheath (H), with electrostatic screen of aluminium/polyester laminated tape (ekwf)
HLgGsekwf	cable with stranded flexible copper conductors (Lg), special cross-linked silicone compound insulation (Gs) and thermoplastic halogen-free outer sheath (H), with electrostatic screen of aluminium/polyester laminated tape (ekwf)

CONSTRUCTION

Conductors:	circular copper class 1 (D), circular stranded copper class 2 (L) or circular flexible stranded copper class 5 (Lg) according to EN 60228
Drain wire:	tinned annealed copper wires class 1 or stranded class 2 according to EN 60228
Insulation:	special cross-linked heat resistant compound type EI2 FR (Gs) according to EN 50363.1
Optional binder:	non hygroscopic halogen free tape
Screen:	aluminium/polyester laminated tape and drain wire (ekwf)
Outer sheath:	thermoplastic zero halogen low smoke compound (H) according to ZN-TF-208

CHARACTERISTIC

Colour of sheath:	red
Core identification:	≤ 5 core: according to HD 308 S2

CHARACTERISTIC

	without protective conductor	with protective conductor
≥ 7 core:	in each layer: brown (starting core), blue (reference core), other cores natural	in outer layer: green-yellow, blue (reference core), others cores shall be natural, in other layers: brown (starting core), blue (reference core), other cores natural
Maximum conductor operating temperature:	+90°C	
Lowest temperature ambient for fixed installation:	-25°C	
Lowest installation temperature:	-10°C	
Maximum short-circuit conductor temperature:	+250°C	
Minimum bending radius:	6 D (D is the overall diameter of the cable)	
Application:	Installations emergency lighting and evacuation systems, fire and smoke detection systems air-conditioning and alarm systems, automatic elevator doors, computer control rooms, offshore and marine emergency systems, emergency evacuation communicators.	
Standard packing:	500 m on drums. Other forms of packing and delivery are available on request.

Flame Retardant, Low Fire Hazard, Halogen Free, Low Smoke Cables and Wires

Cables are manufactured with the use of halogen-free materials. These materials exhibit better fire performance, have improved resistance to flame propagation and can extinguish flame spread through the cable.

Application:

Halogen-free cables are used for applications in public buildings, where fire would present a significant hazard to human life as a result of emission of toxic gasses and dense smoke hampering the evacuation or when the losses caused by the corrosive acid gasses would be higher than other damage caused by fire.

Locations of increased fire safety requirements, where large agglomeration of people and cultural or material goods of high value are present: schools, hospitals, shopping centers, airports, hotels, supermarkets, underground tunnels, multi-storey buildings, stations of underground railways, underground garages, sports and show halls, stadiums, cinemas, theatres, museums, office buildings, educational centers, industrial complexes.

Tested and approved by:

VDE (Verband der Elektrotechnik)

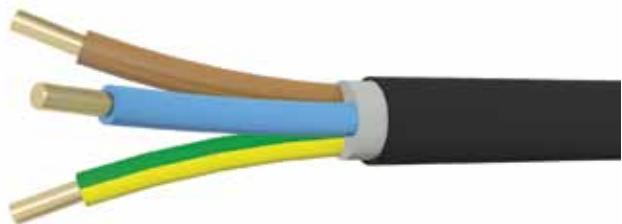

BASEC (British Approvals Service For Cables)

BBJ (Biuro Badawcze ds. Jakości)- Znak Bezpieczeństwa „B”

GOST (Госстандарт)

Halogen-free low smoke power cables

FIRE PERFORMANCE

Flame propagation:	DIN EN 60332-3-24, VDE 0482-332-3-24, IEC 60332-3-24
Smoke density:	DIN EN 61034-2, VDE 0482-1034-2, IEC 61034-2
Gases evolved during combustion:	DIN EN 50267-2-2, VDE 0482-267-2-2, IEC 60754-2: pH ≥ 4,3; conductivity ≤ 10 µS/mm

CONSTRUCTION

Conductors:	bare annealed copper conductor, circular solid class 1 (RE) or circular or circular compacted stranded class 2 (RM) or stranded sector - shaped conductor class 2 (SM) according to EN 60228
Insulation:	cross-linked polyethylene type 2XL1 according to DIN VDE 0276-604
Inner covering:	special flame-retardant and halogen-free compound
Sheath:	thermoplastic halogen - free compound type HM4 according to DIN VDE 0276-604

CHARACTERISTIC

Colour of sheath:	black, blue, green
Core identification:	according to HD 308 S2 or EN 50334

	N2XH-O without protective conductor	N2XH-J with protective conductor
1-core:	black	green-yellow
2-core:	blue, brown	—
3-core:	brown, black, grey	green-yellow, blue, brown
3 core:*	blue, brown, black	—
4-core:	blue, brown, black, grey	green-yellow, brown, black, grey
4-core:*	—	green-yellow, blue, brown, black
5-core:	blue, brown, black, grey, black	green-yellow, blue, brown, black, grey
more 5-core:	black with numbering	green-yellow, others cores black with numbering

*For certain applications only

Maximum conductor operating temperature:	+90°C
Lowest ambient temperature for fixed installation:	-40°C
Lowest installation temperature:	-5°C
Maximum short-circuit conductor temperature:	+250°C
Minimum bending radius:	15D - for single core cable; 12D - for multicore cables (D - overall cable diameter)
Maximum permissible tensile stress with cable grip for Cu-conductor:	50 N/mm ²
Application:	for the supply of electrical energy, particularly for installations where fire and emissions of smoke and toxic fumes create a potential threat. Not suitable for use in ground and water.
Standard packing:	500 m or 1000m on drums. Other forms of packing and delivery are available on request.

Halogen-free low smoke power cables with copper concentric conductor

FIRE PERFORMANCE

Flame propagation:	DIN EN 60332-3-24, VDE 0482-332-3-24, IEC 60332-3-24
Smoke density:	DIN EN 61034-2, VDE 0482-1034-2, IEC 61034-2
Gases evolved during combustion:	DIN EN 50267-2-2, VDE 0482-267-2-2, IEC 60754-2: pH ≥ 4,3; conductivity ≤ 10 µS/mm

CONSTRUCTION

Conductors:	bare annealed copper conductor, circular solid class 1 (RE) or circular or circular compacted stranded class 2 (RM) or stranded sector - shaped conductor class 2 (SM) according to EN 60228
Insulation:	cross-linked polyethylene XLPE type 2XI1 according to DIN VDE 0276-604
Inner covering:	special flame-retardant and halogen-free compound
Concentric conductor:	inner layer - round copper wires, outer layer - copper tape
Separator:	tape
Sheath:	thermoplastic halogen - free compound type HM4 according to DIN VDE 0276-604

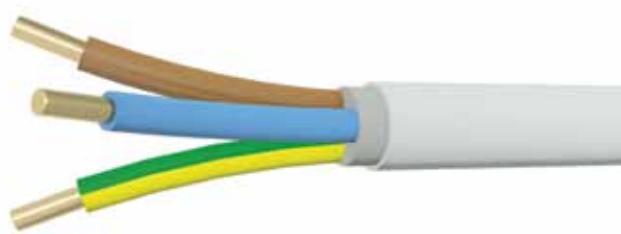

CHARACTERISTIC

Colour of sheath:	black
Core identification:	according to HD 308 S2 or EN 50334
2-core:	blue, brown
3-core:	brown, black, grey
3 core:*	blue, brown, black
4-core:	blue, brown, black, grey
≥ 7-core:	black with numbering
*For certain applications only.	
Maximum conductor operating temperature:	+90°C
Lowest ambient temperature for fixed installation:	-40°C
Lowest installation temperature:	-5°C
Maximum short-circuit conductor temperature:	+250°C
Minimum bending radius:	15D - for single core cable; 12D - for multicore cable (D - overall cable diameter)
Maximum permissible tensile stress with cable grip for Cu-conductor:	50 N/mm ²
Application:	for the supply of electrical energy, especially for installations where fire and emissions of smoke and toxic fumes create a potential threat. The concentric conductor with a traverse spiral of copper serves as a screen and can be used as PE or PEN conductor. Not suitable for use in water.
Standard packing:	500 m on drums. Other forms of packing and delivery are available on request.

with improved fire
behaviour**

FIRE PERFORMANCE

Flame propagation: DIN EN 60332-3-24, VDE 0482-332-3-24, IEC 60332-3-24

Smoke density: DIN EN 61034-2, DIN VDE 0482-1034-2, IEC 61034-2

Gases evolved during combustion: DIN EN 50267-2-2, DIN VDE 0482-267-2-2, IEC 60754-2: pH ≥ 4,3; conductivity ≤ 10 µS/mm

CONSTRUCTION

Conductors: solid or stranded plain copper according to DIN EN 60228

Insulation: cross-linked polyethylene XLPE type 2XI1 according to DIN VDE 0276-604

Filling: halogen-free not vulcanized rubber compound

Sheath: special halogen-free thermoplastic compound type HM2 according to DIN VDE 0250-214

CHARACTERISTIC

Core identification:

	with protective conductor NHXMH-J	without protective conductor NHXMH-O
single-core	green/yellow	black
twin	---	blue, brown
3-core	green/yellow, brown, grey	brown, black, grey
4-core	green/yellow, brown, black, grey	blue, brown, black, grey
5-core	green/yellow, blue, brown, black, grey	blue, brown, black, grey, black
7-core	other cores black with white numbering	black with white numbering

Maximum conductor operating temperature: +70°C

Lowest ambient temperature for fixed installation: -30°C

Lowest installation temperature: -5°C

Maximum short-circuit conductor temperature: +250°C

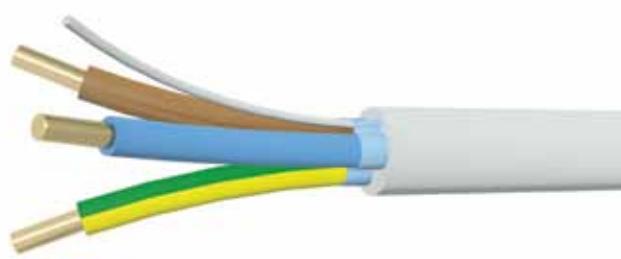

Minimum bending radius: for single core cables: 10D; for multi-core cables: 6D; (D – overall cable diameter)

Application: Installation cables for industrial complexes, public buildings, hotels, airports, hospitals or industrial plants with high concentration of people and/or property. Usable in the open, in dry, damp and wet environments in the open and concealed, as well as in masonry and in concrete, not suitable for imbedding in solidified – or compressed – concrete.

Standard packing: 100 m coils or 500 m on drums. Other forms of packing and delivery are available on request.

**Single core
non-sheathed cables
with low emission of
smoke and corrosive
gases**

FIRE PERFORMANCE

Flame propagation: EN 60332-1-2 (IEC 60332-1), 60332-3-24

Smoke emission: EN 61034-2 (IEC 61034-2)

Corrosive and acid gas emission of insulation: EN 50267-2-2 (IEC 60754-2): pH ≥ 4,3; Conductivity: ≤ 10 µS/mm

CONSTRUCTION

Conductor: annealed copper, class 1 solid (H07Z-U), class 2 stranded (H07Z-R) or class 5 flexible (H07Z-K) according to EN 60228

Insulation: special thermosetting, low smoke, zero halogen compound type EI5, according to EN 50363-5

CHARACTERISTIC

Colour of insulation: green/yellow, black, blue, brown, grey, orange, pink, red, white or other colours.

Minimum bending radius: **For cable diameter D (mm)**

	D ≤ 8	8 < D ≤ 12	12 < D ≤ 20	D > 20
--	-------	------------	-------------	--------

Normal use	4 D	5 D	6 D	6 D
------------	-----	-----	-----	-----

Careful bending at termination	2 D	3 D	4 D	4 D
--------------------------------	-----	-----	-----	-----

Maximum conductor operating temperature: +90°C

Lowest ambient temperature for fixed installation (static): -40°C

Lowest installation temperature (flexing): -5°C

Maximum short-circuit temperature: +250°C

Test voltage 50Hz: 2500V

Application: when low emission of smoke and corrosive gases is required in case of burning. Intended for installation in surface mounted or embedded conduits, or similar closed systems. Suitable for fixed protected installation in, or on, lighting and control gear for voltages up to 1000 V AC or, up to 750V DC to earth.

Standard packing: 100 m in coils or on spools, or 500 m on drums. Other forms of packing and delivery are available on request.

Single and multicore flexible cables, cross-linked halogen-free compound insulated and sheathed, with low smoke and corrosive gases emission

FIRE PERFORMANCE

Flame propagation: EN-60332-1-2, EN 60332-3-24, IEC 60332-3-24

Smoke emission: EN 61034-2, IEC 61034-2

Corrosive and acid gas emission of insulation: EN 50267-2-2, IEC 60754-2: pH ≥ 4,3; Conductivity: ≤ 10 µS/mm

CONSTRUCTION

Conductors: tinned annealed copper conductor flexible class 5 according to EN 60228

Insulation: cross-linked halogen free compound type El8 according to EN 50363-5

Sheath: cross-linked halogen free compound type EM8 according to EN 50363-6

CHARACTERISTIC

Colour of sheath: Black

Core identification: according to HD 308 S2

Single core twin: green-yellow or black blue and brown

3-core: green-yellow, blue, brown

4-core: green-yellow, brown, black, grey

5-core: green-yellow, blue, brown, black, grey

> 5 core: green-yellow, other cores black with white numbering

Maximum conductor operating temperature: +70°C

Lowest ambient temperature for fixed installation: -5°C

Maximum short-circuit conductor temperature: +250°C

Test voltage 50Hz: 2500V

Pulling strength: not exceed 15 N/mm²

Minimum bending radius: **For cable diameter D (mm)**

D ≤ 8

8 < D ≤ 12

12 < D ≤ 20

D > 20

Normal use

Application: For indoor and temporary outdoors usage, particularly for situations in which low emission of smoke and corrosive gases is required in case of burning. Use up to 1000V AC is permitted for fixed, protected installation in appliances and also for motor connections of hoisting motors and the like.

Standard packing: 500 m on drums. Other forms of packing and delivery are available on request.

cords**

FIRE PERFORMANCE

Flame propagation:	EN 60332-1-2 (IEC 60332-1)
Smoke emission:	EN 61034-2 (IEC 61034-2)
Gases evolved during combustion:	EN 50267-2-1 (IEC 60754-1): < 0,5% acid gas EN 50267-2-2 (IEC 60754-2): pH ≥ 4,3; conductivity ≤ 10 µS/mm The product is conformed with the RoHS Directive 2002/95/CE, Low-Voltage Directive 2006/95/EC.

CONSTRUCTION

Conductors:	annealed copper conductor flexible class 5 acc. to EN 60228
Insulation:	thermoplastic halogen-free compound type TI6 acc. to EN 50363-7
Sheath:	thermoplastic halogen-free compound type TM7 acc. to EN 50363-7

CHARACTERISTIC

Color of sheath:	white
Core identification:	HD 308 S2
twin core:	blue and brown
3-core:	green/yellow, blue, brown
4-core:	green/yellow, brown, black, grey
5-core:	green/yellow, blue, brown, black, grey
Test voltage 50Hz:	2000V
Maximum conductor operating temperature:	+ 60°C
Lowest installation temperature:	+5°C
Maximum short-circuit conductor temperature:	+150°C
Minimum bending radius:	7,5 x D, D – overall diameter of cable
Application:	These cables having low emission of smoke and corrosive gases when exposed to fire. These cables are intended for the connection of domestic appliances to the fixed supply, in domestic premises, kitchens, offices, for household appliances.
Standard length cable packing:	100 m in coils or 500 m on drums. Other forms of packing and delivery are available on request.

**Thermosetting
insulated, single-
core, sheathed cable
450/750V**

FIRE PERFORMANCE

Flame propagation: BS EN 60332-1-2, BS EN 60332-3-24

Smoke emission: BS EN 61034-2

Corrosive and acid gas emission: BS EN 50267-2-1; HCl < 0,5 %

CONSTRUCTION

Conductor: annealed copper, solid class 1 or stranded conductor class 2 according to BS EN 60228

Insulation: halogen-free thermosetting compound type EI5 according to BS EN 50363-5

Colour of insulation: brown and blue

Sheath: halogen-free thermoplastic compound type LTS4 according to BS 7655-6.1

Colour of sheath: white, grey, or other agreed

CHARACTERISTIC

Maximum conductor operating temperature: +90°C

Lowest installation temperature: 0°C

Maximum short-circuit conductor temperature: +250°C

Test voltage 50Hz: 2500V

Minimum bending radius: 6D; (D- overall cable diameter)

Application: for fixed installation in dry or damp areas for domestic and light industrial wiring. Particularly for situations in which low emission of smoke and corrosive gases is required in case of burning. These cables are not intended to provide circuit integrity in case of fire.

Standard packing: 100 m on spools or 500 m on drums. Other forms of packing and delivery are available on request.

Number and cross-sectional area of conductors		Class of conductor	Nominal thickness of insulation	Nominal thickness of sheath	Approximate overall diameter	Approximate net weight of cables	Maximum resistance of conductor at 20°C

Thermosetting insulated and LSOH sheathed flat cable with circuit protective conductor (CPC), low smoke halogen free

FIRE PERFORMANCE

Flame retardant: BS EN 60332-1-2, BS EN 60332-3-24

Smoke emission: EN 61034-2

Corrosive and acid gas emission of insulation: EN 50267-2-1; HCl < 0,5 %

CONSTRUCTION

Conductor: annealed copper, solid class 1 (RE) or stranded conductor class 2 (RM) acc. to BS EN 60228

Insulation: thermosetting compound XLPE type GP8 acc. to BS 7655-1.3

Sheath LSOH compound type LTS2 acc. to BS 7655-6.1

CHARACTERISTIC

Colour of sheath: white or other on special request

single core: brown or blue

Core identification: **twin core:** brown and blue, or for 2 x 1,0 and 2 x 1,5 cables, brown and brown

3-core: brown, black (centre core) and grey

Minimum bending radius: 6 x D, D - overall diameter

Maximum conductor operating temperature: +90°C

Lowest ambient temperature for fixed installation: -30°C

Lowest installation temperature: -5°C

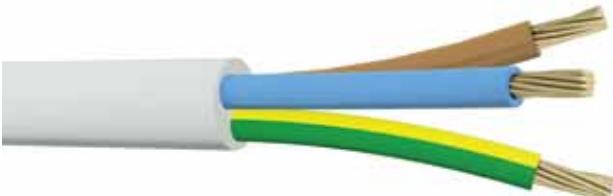

Maximum short-circuit temperature: +250°C

Test voltage: 2000V

Application: for fixed installation in dry or damp premises. Suitable for installation in walls, on a wall or ceiling, or embedded in plaster. Particularly for situations in which low emission of smoke and corrosive gases is required in the case of burning. These cable are not intended to provide circuit integrity in case of fire.

Standard packing: 100 m in coils or 500 m on drums. Other forms of packing and delivery are available on request.

**LSOH insulated
and sheathed
flexible cords**

FIRE PERFORMANCE

Flame propagation:	BS EN 60332-1-2 (IEC 60332-1-2)
Smoke density:	BS EN 61034-2 (IEC 61034-2)
Gases evolved during combustion:	BS EN 50267-2-1 (IEC 60754-1): HCL $\leq 0,5\%$ BS EN 50267-2-2 (IEC 60754-2): pH $\geq 4,3$; conductivity $\leq 10 \mu\text{S}/\text{mm}$

CONSTRUCTION

Conductor:	annealed copper, class 5 flexible conductor according to BS EN 60228
Insulation:	special thermoplastic compound LSOH (Low Smoke Zero Halogen)
Sheath:	special thermoplastic compound LSOH (Low Smoke Zero Halogen)

CHARACTERISTIC

Colour of sheath:	White
Colour of insulation:	according to HD 308 S2
twin core:	blue and brown
3-core:	green/yellow, blue, brown
4-core:	green/yellow, brown, black, grey
5-core:	green/yellow, blue, brown, black, grey
Maximum conductor operating temperature:	+60°C
Lowest ambient temperature for fixed installation:	-30°C
Lowest installation temperature:	-5°C
Maximum short-circuit conductor temperature:	+150°C
Test voltage 50Hz:	2000V
Minimum bending radius:	6 x cable diameter
Application:	In domestic premises, kitchens, and offices; for household appliances, including in damp premises; for medium duties (e.g. washing machines, spin dryers, and refrigerators). Particularly for situations in which low emission of smoke and corrosive gases is required in case of burning.
Standard packing:	100 m on spools or 500 m on drums. Other forms of packing and delivery are available on request.

**XLPE insulated,
LSOH sheathed,
round wire armoured
cables**

FIRE PERFORMANCE

Flame propagation:	BS EN 60332-1-2 and BS EN 60332-3-24 Category C
Smoke emission:	BS EN 61034-2
Corrosive and acid gas emission:	BS EN 50267-2-1, HCl ≤ 0,5%

CONSTRUCTION

Conductors:	annealed copper conductor, circular, circular compacted or shaped stranded class 2 according to BS EN 60228
Insulation:	cross-linked polyethylene XLPE type GP8 according to BS 7655-1.3
Bedding:	LSOH (special low smoke zero halogen compound)
Armour:	for single-core cables – single layer of aluminium wires applied spirally over the bedding (AWA) for two or more cores cables – single layer of galvanized steel wires applied spirally over the bedding (SWA)
Outer sheath:	black LSOH compound type LTS1 according to BS 7655-6.1

CHARACTERISTIC

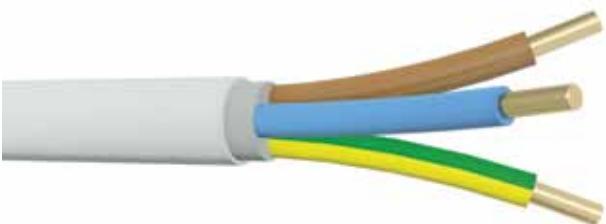

Core identification:	
1-core:	brown or blue
2-core:	brown, blue
3-core:	brown, black, grey
4-core:	blue, brown, black, grey
5-core	green/yellow, blue, brown, black, grey
auxiliary cables	white with black numbering
Maximum conductor operating temperature:	+90°C
Lowest installation temperature:	0°C
Maximum short-circuit conductor temperature:	+250°C
Minimum bending radius:	6D for cables with circular copper conductors and 8D for cables with shaped copper conductors; D – overall cable diameter
Application:	For use in fixed installations in industrial areas, buildings and similar applications.

**Halogen-free light
sheathed cables
with improved fire
behaviour**

FIRE PERFORMANCE

Flame propagation: EN 60332-3-23, IEC 60332-3-23

Smoke density: EN 61034-2, IEC 61034-2

Gases evolved during combustion: EN 50267-2-1, IEC 60754-1: HCL $\leq 0,5\%$

EN 50267-2-2, IEC 60754-2: pH $\geq 3,5$; conductivity $\leq 10 \mu\text{S}/\text{mm}$

CONSTRUCTION

Conductors: plain annealed solid copper class 1 for 1,5 and 2,5 mm², stranded copper class 2 for 6 and 10 mm²
according to EN 60228, IEC 60228

Insulation: special halogen-free thermoplastic polyolefin compound

Filling: halogen-free filling compound

Sheath: special halogen-free thermoplastic polyolefin compound

CHARACTERISTIC

Colour of sheath: white

Core identification HD 308 S2

	with protective conductor (S)	without protective conductor (N)
--	-------------------------------	----------------------------------

twin	-	blue, brown
3-core	green/yellow, blue, brown	brown, black, grey
4-core	green/yellow, brown, black, grey	blue, brown, black, grey
5-core	green/yellow, blue, brown, black, grey	blue, brown, black, grey, black

Maximum conductor operating temperature: +70°C

Lowest recommended temperature during laying: -15°C

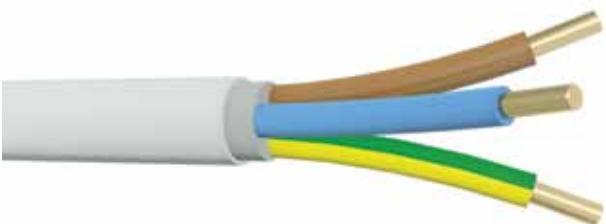

Maximum short-circuit conductor temperature: +160°C

Minimum bending radius: 10D; D(overall cable diameter)

Application: Installation cables for industrial complexes, public buildings, hotels, airports, hospitals or industrial plants with high concentration of people and/or property. The cable is halogen free and it features low density of smoke and toxic fumes in case of fire. Usable in the open, in dry, damp and wet environments in the open and concealed, as well as in masonry and in concrete. Not suitable for use in ground and water, for imbedding in solidified – or compressed – concrete.

Standard packing: 500 m on drums. Other forms of packing and delivery are available on request.

Halogen-free low smoke power cables with copper concentric conductor

FIRE PERFORMANCE

Flame propagation: EN 60332-3-24, IEC 60332-3-24 (SS 4241475 F4C)

Smoke density: EN 61034-2, IEC 61034-2

Gases evolved during combustion: EN 50267-2, IEC 60754-2: pH ≥ 4,3; conductivity ≤ 10 µS/mm

CONSTRUCTION

Conductors: bare annealed copper conductor, circular solid class 1 according to EN 60228

Insulation: cross-linked polyethylene XLPE type DIX3

Inner covering: special flame-retardant and halogen-free compound

Concentric conductor: inner layer - round copper wires, outer layer - copper tape

Separator: tape

Sheath: thermoplastic halogen - free polyolefin compound

CHARACTERISTIC

Colour of sheath: black

Core identification: according to HD 308 S2

2-core: blue, brown

3-core: brown, black, grey

4-core: blue, brown, black, grey

The materials used in manufacture are cadmium - free and contain no silicone.

Maximum conductor operating temperature: +90°C

Lowest ambient temperature for fixed installation: -30°C

Lowest installation temperature: -5°C

Maximum short-circuit conductor temperature: +250°C

Minimum bending radius: 12D - for multicore cable (D - overall cable diameter)

Maximum permissible tensile stress with cable grip for Cu-conductor: 50 N/mm² (total cross-section of the conductors, any screen not included)

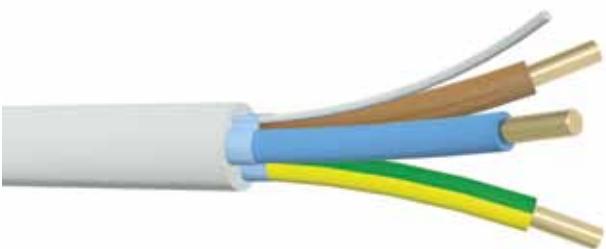

Application: for the supply of electrical energy, especially for installations where fire and emissions of smoke and toxic fumes create a potential threat.

Standard packing: 500 m on drums. Other forms of packing and delivery are available on request.

XLPE insulated, Al and halogen free sheathed electric cables

FIRE PERFORMANCE

Flame retardant:	IEC 60332-1-2, IEC 60332-3-24 (SS 4241475 F4C), IEC 60332-3-23 (SS 4241475 F4B)
Smoke density:	EN 61034-2, IEC 61034-2
Gases evolved during combustion:	IEC 60754-1, IEC 60754-2, EN 50267-2-2: pH ≥ 4,3; conductivity ≤ 10 µS/mm

CONSTRUCTION

Conductors:	annealed copper solid class 1 acc. to EN 60228
Insulation:	cross-linked polyethylene XLPE
Drain wire	1mm ² tinned copper stranded conductor (Class 2) RE acc to EN 60228 applied longitudinally under Al tape
Screen	aluminium laminated tape and drain wire
Sheath:	special halogen-free thermoplastic compound

CHARACTERISTIC

Colour of sheath:	White
Core identification:	3-core: green-yellow, blue, brown 4-core: green-yellow, brown, black, grey 5-core: green-yellow, blue, brown, black, grey
Maximum conductor operating temperature:	+70°C
Lowest ambient temperature for fixed installation:	-30°C
Lowest installation temperature:	-15°C
Maximum short-circuit conductor temperature:	+250°C
Test voltage 50Hz:	2000V
Minimum bending radius:	8xD, D-overall diameter
Application:	Recommended for indoor and outdoor applications. The cable is UV-resistant, may be installed in pipes, ducts, within or under the plaster. Especially recommended for applications where low smoke emission and low level of corrosive gases is required in the case of fire. The cable screen applied in the form aluminium /polyester laminate tape together with tinned copper drain wire gives the cable good elasticity and mechanical strength as well as protects the cable against the influence of electromagnetic field. The materials used for production of the cable are environmentally friendly, the cable does not contain PVC and chloroprene compounds.
Standard packing:	100 m coils or 500 m on drums. Other forms of packing and delivery are available on request.

FIRE PERFORMANCE

Flame propagation:	DIN EN 60332-1-2
Smoke emission:	DIN EN 61034-2
Corrosive and acid gas emission:	DIN EN 50267-2-2, pH ≥ 4,3; conductivity ≤ 100 µS/cm

CONSTRUCTION

Conductors:	annealed tinned copper conductor class 5 according to IEC 60228
Separator:	semi-conducting tape under insulation
Insulation:	EPR thermosetting compound type 3GI3 according to DIN VDE 0207-20
Outer sheath:	halogen free thermosetting compound type HM3 according to DIN VDE 0207-24

CHARACTERISTIC

Colour of outer sheath:	black
Features:	oil resisting, chemicals, flame retardant and weather resistant
Tests:	DIN VDE 0250
Temperature range:	for flexible use: -25 up to 90°C, for fixed installation: -40 up to 90°C
Minimum bending radius:	for flexible use: 10D, for fixed installation: 6D; (D – overall cable diameter)
Application:	for use in electrical installations at working voltages up to 3,6/6 kV, where low smoke in case of burning is required.
Standard packing:	500 m on drums. Other forms of packing and delivery are available on request.

Fire Resistant, Flame Retardant, Halogen Free, Low Smoke Data Cables

Cables are manufactured with the use of halogen-free materials. These materials exhibit better fire performance, have improved resistance to flame propagation and can extinguish flame spread through the cable. Cables have low emission of smoke and corrosive gases when affected by fire.

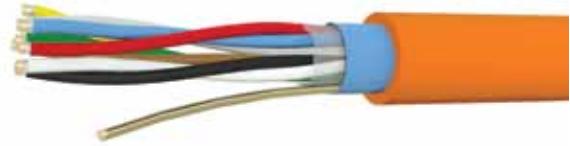

Application:

Cables are used for the telephone transmission, measurement and control technology. Installed in locations of increased fire safety requirements, where large agglomeration of people and cultural or material goods of high value are present: schools, hospitals, shopping centers, airports, hotels, supermarkets, underground tunnels, multi-storey buildings, stations of underground railways, underground garages, sports and show halls, stadiums, cinemas, theatres, museums, office buildings, educational centers, industrial complexes.

Tested and approved by:

VDE (Verband der Elektrotechnik)

Halogen-free low smoke fire resistant wiring cables for telecommunication and data processing systems

FIRE PERFORMANCE

Insulation integrity FE 180:	DIN VDE 0472-814 (800°C, 180 minutes), IEC 60331
System integrity E90:	DIN 4102-12 (90 min.)
Flame propagation:	DIN EN 60332-3-24, VDE 0482-332-3-24
Smoke density:	VDE 0482-1034-2, DIN EN 61034-2, IEC 61034-2
Gases evolved during combustion:	VDE 0482-267-2-2, DIN EN 50267-2-2, IEC 60754-2: pH ≥ 3,5; conductivity ≤ 10 µS/mm

CONSTRUCTION

Conductors:	bare solid copper conductor 0,8 mm
Insulation:	special core insulation with mica tape and halogen-free cross-linked compound according to EN 50290-2-26 (70°C)
Pair:	two cores twisted to pair and each 4 pairs consist to unit
Separator:	polyester tape
Screen:	aluminium/polyester laminated tape and solid copper drain wire
Drain wire:	solid tinned annealed copper wire 0,8 mm
Sheath:	thermoplastic halogen-free, flame retardant compound according to EN 50290-2-27 (70°C)

CHARACTERISTIC

Colour of sheath:	grey, orange or red		
Identification of pairs:	Pair no.	a-wire	b-wire
	1	blue	red
	2	grey	yellow
	3	green	brown
	4	white	black

Two-pair cables shall be cabled in quad formation and colour coded: blue, yellow, red, grey

Operating voltage:	peak voltage max. 225V (not for purposes of high current and power installation)
Loop resistance:	maximum 73,2 Ω/km
Insulation resistance at temperature 20°C:	minimum 100 MΩ x km
Mutual capacitance:	maximum 120 nF/km at 800 Hz (this values may be extended at 20% with a make-up up to 4 pairs)
Capacitance unbalance:	maximum 200 pF/100 m at 800 Hz (20% of the values, but one value up to 400 pF is allowed)
Test voltage 50 Hz:	core/core – 500V; core/screen – 2000V
Temperature range:	flexing: - 5°C to + 50°C, fixed installation- 30°C to + 70°C
Minimum bending radius:	6D (D - overall cable diameter)

Application:

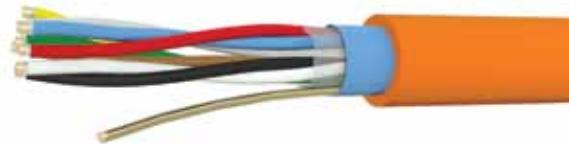

Fire resistant, halogen-free static screened installation cables for telecommunication purpose. The static screen prevents strong interference impulse. Suitable for fixed installation everywhere, where in case of fire human life and material assets are to be protected, e.g. in industrial complexes, public buildings, hotels, airports, underground railway networks, hospitals. Not for purposes of high current and power installation.

Standard packing:

500 m on drums. Other forms of packing and delivery are available on request.

Number pairs and diameter of conductor	Approximate overall diameter	Approximate net weight of cable
n x 2 x mm	mm	kg/km
1 x 2 x 0,8	7,5	65
2 x 2 x 0,8	8,0	87
4 x 2 x 0,8	11,7	148

Halogen-free low smoke installation cables for telecommunication and data processing systems

FIRE PERFORMANCE

Flame propagation:	DIN EN 60332-3-24, VDE 0482-332-3-24 (IEC 60332-3-24 Category C)
Smoke density:	VDE 0482-1034-2, DIN EN 61034-2 (IEC 61034-2)
Gases evolved during combustion:	VDE 0482-267-2-2, DIN EN 50267-2-2 (IEC 60754-2: pH ≥ 3,5; conductivity ≤ 10 µS/mm)

CONSTRUCTION

Conductors:	bare solid copper conductor 0,6 and 0,8 mm
Insulation:	special halogen-free compound according to DIN EN 50290-2-26
Unit:	core twisted to pairs, 4 pairs consist to unit, units stranded to layers
Separator:	polyester tape
Screen:	aluminium/polyester laminated tape and solid copper drain wire
Drain wire:	solid tinned annealed copper wire 0,6 or 0,8 mm
Sheath:	thermoplastic halogen-free, flame retardant compound according to DIN EN 50290-27

CHARACTERISTIC

Colour of sheath:	grey, orange or red	
Identification of pairs:	Pair no.	a-wire b-wire
	Loop 1	blue red
	Loop 2	grey yellow
	Loop 3	green brown
	Loop 4	white black
Binding tapes:	binding tapes with numerical marking of unit	
Identification two-pair cable:	two-pair cables shall be cabled in quad formation and colour coded: blue, yellow, red, grey	
	Pair no.	a-wire b-wire
	Loop 1	blue red
	Loop 2	grey yellow
Loop resistance:	maximum 130 Ω/km at 0,6 mm 73,2 Ω/km at 0,8 mm	
Mutual capacitance:	max. 120 nF/km at 800 Hz (this values may be extended at 20% with a make-up up to 4 pairs)	
Capacitance unbalance:	max. 200 pF/100 m at 800 Hz (20% of the values, but one value up to 400 pF is allowed)	
Mutual capacitance:	max. 120 nF/km at 800 Hz	
Capacitance unbalance:	max. 200 pF/100 m at 800 Hz	

Operating voltage (peak voltage)	225V (not for purposes of high current and power installations)
Temperature range:	
flexing:	- 5°C to + 50°C
fixed installation	- 30°C to + 70°C
Minimum bending radius:	6D (D - overall cable diameter)
Application:	for signal transmission. The cables are preferably used for indoor telecommunication installation in dry and damp places, but also in the open for fixed installation on outer walls of buildings.
Standard packing:	500 m on drums. Other forms of packing and delivery are available on request.

Halogen-free low smoke installation cables for telecommunication and data processing systems

FIRE PERFORMANCE

Flame propagation:	DIN EN 60332-3-24, VDE 0482-332-3-24 (IEC 60332-3-24 Category C)
Smoke density:	VDE 0482-1034-2, DIN EN 61034-2 (IEC 61034-2)
Gases evolved during combustion:	VDE 0482-267-2-2, DIN EN 50267-2-2 (IEC 60754-2: pH ≥ 3,5; conductivity ≤ 10 µS/mm)

CONSTRUCTION

Conductors:	bare solid copper conductor 0,6 and 0,8 mm
Insulation:	special halogen-free compound according to DIN EN 50290-2-26
Unit:	core twisted in quads and quads are stranded to units
Separator:	polyester tape
Screen:	aluminium/polyester laminated tape and solid copper drain wire
Drain wire:	solid tinned annealed copper wire 0,6 or 0,8 mm
Sheath:	thermoplastic halogen-free, flame retardant compound according to DIN EN 50290-27

CHARACTERISTIC

Colour of sheath:	grey, orange or red
Colour code:	Quad no.
Quad 1:	basic colour of all cores red
Quad 2:	basic colour of all cores green
Quad 3:	basic colour of all cores grey
Quad 4:	basic colour of all cores yellow
Quad 5:	basic colour of all cores white
The insulation of single cores are marked with black rings – according to DIN VDE 0815	
The marker of units are identified with a red plastic tape helix, the others units with white or uncoloured plastic tape.	
Loop resistance:	maximum 130 Ω/km at 0,6 mm, 73,2 Ω/km at 0,8 mm
Insulation resistance at temperature 20oC:	minimum 100 MΩ x km
Mutual capacitance:	maximum 120 nF/km1) at 800 Hz
Capacitance unbalance:	K1 maximum 300 pF/100 m 2) at 800 Hz K9 – K12 maximum 100 pF/100 m 3) at 800 Hz
Operating voltage (peak voltage):	300V (not for purposes of high current and power installations)
Temperature range:	flexing: - 5°C to + 50°C; fixed installation- 30°C to + 70°C
Minimum bending radius:	6D (D - overall cable diameter)

Application:

for signal transmission. The halogen-free installation cables with improved characteristics and produce no corrosive gases in case of fire are preferably used for indoor telecommunication installation in dry and damp places, but also in the open for fixed installation on outer walls of buildings.

Standard packing:

500 m on drums. Other forms of packing and delivery are available on request.

¹⁾ This value may be extended by 20% with make-up to 4 pairs

²⁾ 20% of the values, but one value up to 500 pF is allowed

³⁾ 10% of the values, but four values up to 300 pF are allowed

Flexible halogen-free signal and control cable for electronics

FIRE PERFORMANCE

Flame propagation: EN 60332-1-2 (IEC 60332-1)

Smoke emission: EN 61034-2 (IEC 61034-2)

Gases evolved during combustion:
EN 50267-2-1 (IEC 60754-1): < 0,5% acid gas
EN 50267-2-2 (IEC 60754-2): pH ≥ 4,3; conductivity ≤ 10 µS/mm

CONSTRUCTION

LiHH flexible, halogen-free insulated and sheathed, colour coded cables in multicore construction

LiHCH flexible, halogen-free insulated, and sheathed colour coded cables in multicore construction, with collective screen

Conductor: bare copper, fine wire conductors, bunch stranded

Insulation: thermoplastic halogen-free compound type HI2

Assembly: core twisted concentrically, LiHCH assembly foil taped

Screen: tinned copper braid (only in LiHCH cables)

Sheath: thermoplastic halogen-free compound type HM2

CHARACTERISTIC

Colour of sheath: grey (RAL 7032)

Colour code: 1 to 10 cores – colour identification acc. to DIN 47100, 11 to 34 cores – insulation of the conductor gives the second colour extruded on the basic colour as a form of longitudinal stripes (according to special customer requirements - colour ring placed every 10 mm)

No of core	Colour	No of core	Colour	No of core	Colour	No of core	Colour	No of core	Colour
1	white	8	red	15	white-yellow	22	brown - blue	29	pink - green
2	brown	9	black	16	yellow - brown	23	white - red	30	yellow - pink

7	blue	14	brown - green	21	white - blue	28	yellow - grey		

Peak working voltage: 500V (not for power purposes)

Inductance: ~0,7 mH /km

Mutual capacitance: core – core ~ 120 nF/km, core – screen ~ 155 nF/km

Insulation resistance: ~ 200 MΩ x km

Maximum conductor resistance at temperature 20°C:

 0,25 mm² (14 x 0,15 mm) ~ 80 Ω/km

 0,50 mm² (16 x 0,20 mm) ~ 39 Ω/km

 1 mm² (32 x 0,20 mm) ~ 19,5 Ω/km

 0,34 mm² (7 x 0,25 mm) ~ 57,5 Ω/km

 0,75 mm² (24 x 0,20 mm) ~ 26 Ω/km

 1,5 mm² (30 x 0,25 mm) ~ 13,3 Ω/km

Test voltage 50Hz:

1200V

Lowest ambient temperature for fixed installation:

-30°C to + 80°C

Lowest installation temperature:

-5°C

Minimum bending radius:

LiHH 7,5 x D, LiHCH 10 x D ; D – overall cable diameter

LiHH cables are data transmission cables also used in control and signal lines in electronics for computer systems, electronic control and regulating gear, office machinery, scales, etc.

LiHCH cables are used in the electronics of computer systems, electronics control and regulating gear, office machinery, scales and anywhere where screened cables of the smallest dimensions are necessary.
These cables having low emission of smoke and corrosive gases when exposed to fire.

Offshore/Marine Cables

Cables are manufactured with use of XLPE or special cross-linked HF S compound. All materials are halogen free, low smoke and have improved resistance for flame propagation. Selected types can also maintain its circuit integrity.

Application:

For fixed installations in all areas and open decks on ships

Tested and approved by:

ABS – American Bureau of Shipping

DNV – Det Norske Veritas

GL – Germanischer Lloyd AG

RINA – Rules for the Approval of Manufacturers of Materials

LR – Lloyd's Register

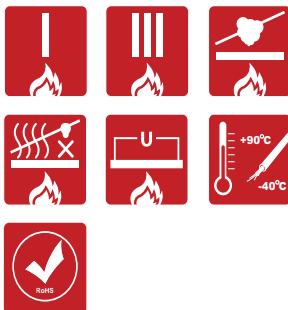

BV – Bureau Veritas

PRS – Polish Ships Register

RMRS – Russian Maritime Register of Shipping

ClassNK – Nippon Kaiji Kyokai (ship classification society)

**Halogen-free fire
resistant shipboard
power cables**

FIRE PERFORMANCE

Fire resistant:	IEC 60331-21: for cable diameters \leq 20 mm; IEC 60331-31: for cable diameters $>$ 20 mm
Flame retardant:	IEC 60332-1-2, IEC 60332-3-22 Category A
Smoke emission:	IEC 61034-1, IEC 61034-2 min. 60%
Gases evolved during combustion:	IEC 60754-1: < 0,5% HCl and HBr IEC 60754-2: pH \geq 4,3; conductivity \leq 10 μSmm^{-1}

CONSTRUCTION

Conductors:	circular or circular compacted stranded bare or tinned copper class 2 acc. to IEC 60228
Insulation:	special cross-linked compound S 95 acc. to IEC 60092-360
Inner covering:	special flame-retardant, halogen-free compound for cables up to 16 mm ² , tape bedding and special flame-retardant, halogen-free compound for cables 25 mm ² and above
Outer sheath:	thermoplastic halogen-free compound type SHF1 acc. to IEC 60092-360

CHARACTERISTIC

Colour of sheath:	orange

Halogen-free ship-board power cables with cross-linked polyethylene insulation and halogen-free sheath, with screen

FIRE PERFORMANCE

Flame retardant:	IEC 60332-1-2, IEC 60332-3-22 Category A
Smoke emission:	IEC 61034-1, IEC 61034-2 min. 60%
Gases evolved during combustion:	IEC 60754-1: < 0,5% HCl and HBr IEC 60754-2: pH ≥ 4,3; conductivity ≤ 10 µSmm ⁻¹

CONSTRUCTION

Conductors:	circular stranded bare or tinned copper class 2 1 to 6mm ² circular compacted stranded bare or tinned copper class 2 10 to 300 mm ² circular stranded bare or tinned copper class 5 sector shaped 35 to 300 mm ² acc. to IEC 60228
Insulation:	≤ 35 mm ² : cross-linked polyethylene XLPE acc. to IEC 60092-360 > 35 mm ² : cross-linked polyolefin compound HF 90 acc. to IEC 60092-360
Inner covering:	special flame-retardant, halogen-free compound for cables up to 16 mm ² , tape bedding and special flame-retardant, halogen-free compound for cables 25 mm ² and above - circular compacted stranded conductor, tape bedding for cables 35mm ² and above - sector shaped conductor
Screen (armour):	copper wire braiding
Sheath:	thermoplastic halogen-free polyolefin compound type SHF1 acc. to IEC 60092-360

CHARACTERISTIC

Colour of sheath:	grey or black	NKOXSekw with protective conductor
Core identification:	NKOXSekw	
1-core:	not specified	green-yellow
2-core:	black, blue	—
3-core:	black, blue, brown	green-yellow, black, blue
4-core:	blue, brown, black, grey	green-yellow, black, blue, brown
5 and more:	white with black numbering	green-yellow, others cores white with black numbering

or acc. to HD 308 S2

2-core:	blue, brown	-
3-core:	brown, black, grey	green-yellow, blue, brown
4-core:	blue, brown, black, grey	green-yellow, brown, black, grey
5-core:	blue, brown, black, grey, black	green-yellow, blue, brown, black, grey

Maximum conductor operating temperature: +90°C

Lowest ambient temperature for fixed installation: -40°C

Lowest installation temperature: -15°C

Maximum short-circuit conductor temperature: +250°C

CHARACTERISTIC

Minimum bending radius:	Overall diameter of cable (D) ≤ 25 mm > 25 mm	Minimum bending radius 4 D 6 D
Application:	For fixed installations in all areas and open deck in ships. *Cables with class 5 conductors are produced on request.

PICTOGRAMS

Description of pictograms used in catalogue

Positive result for vertical flame spread test acc. to IEC 60331-1-2

Positive result for vertical flame spread test acc. to IEC 60332-3 (vertically-mounted bunched wires or cables)

No smoke density acc. to IEC 61034

No harmful gases emission acc. to 60754

Pass circuit integrity acc. to IEC

Maintaining the function of electrical cable during the fire, defined as the concept of cable systems acc. to DIN 4102-12 (classes E30, E60 or E90)

Pass circuit integrity acc. to BS 6387 (Category C)

Pass fire and water resistance test acc. to BS 6387 (Category W)

Pass fire resistance and mechanical stroke test acc. to BS 6387 (Category Z)

Pass fire resistance and mechanical stroke test acc. to EN 50200

Pass fire resistance and mechanical stroke test acc. to EN 50200 during minimum 30 minutes

Pass fire resistance and mechanical stroke test acc. to EN 50200 during minimum 120 minutes

Pass fire and mechanical test acc. to BS 7846 (Category F2)

Pass fire, mechanical and water test acc. to BS 8491 during minimum 120 minutes (Category F120)

Minimum and maximum exploitation temperature

Maximum conductor operating temperature

UV resistant
